Background, Purpose and Summary of Contents

The purpose of this document is to record in a single place and in a concise fashion the joint workprogramme and activities of the three regional workshops: AOW, EWOS and OIW. The workshops aim to maximize the commonality of consensus on a worldwide basis, whilst minimizing the specific requirements of geographical regions or different cultures. Management of these common developments is co-ordinated by the Regional Workshops Co-ordinating Committee (RWS-CC), which meets twice per year and whose chairmanship rotates annually around the three workshops. Responsibility for the maintenance of this standing document lies at any time with the chairman then in office.

This standing document is aimed at members of ISO/IEC JTC1 SGFS and other ISO and IEC committees, together with any other organizations for whom the advance information is useful in their forward planning. It is available from all three workshops' secretariats. It is anticipated that the document will be updated after each RWS-CC meeting, and successive releases will be distinguished by a unique publication date on the front cover.

The majority of the work is the production of proposed draft International Standardized Profiles (pdISPs) for submission to ISO/IEC JTC1 SGFS for subsequent balloting and publication as full ISPs. This aspect of the work is summarized in parts 1 and 2, the former containing work not yet submitted to SGFS, and the latter a simple table of those already submitted. Further progress on material already submitted to SGFS is documented in that group's own Standing Document number 4.

Work is also underway to co-ordinate the development of Profile Test Specifications (PTSs). Included are detailed Abstract Test Specifications which will be submitted to ISO for standardization in the appropriate sub-committee. This part of the programme is summarized in part 3, showing the planned order of the developments.

Lastly, significant additional effort is devoted to the preparation of corpuses of agreed technical or procedural material in the field of Open Systems, which are considered to be of value when harmonized in a similar fashion to ISPs, but are not themselves candidates for further processing by SGFS. These are jointly published by the three workshops as Regional Workshop Technical Reports (RWS-TRs). The active work items are summarized in part 4, whilst part 5 gives the list of approved Reports which may be obtained from any of the workshops' secretariats.

The document concludes by listing the anticipated schedule of meetings of the RWS-CC and workshops themselves (part 6).
