Subject: Taxonomy substructure principles in TR 10000-2

Action: Request for contributions and review

Date: June 1992

On preparing a further revision of TR 10000-2, SGFS has decided to incorporate, in a uniform way, new subclauses containing descriptions of the principles underlying the taxonomy structures for each identified class of application, eg:

> 4.5.1.6 ff Principles for the Taxonomy of Subnetwork Profiles
> 4.5.3.4 ff Principles for the Taxonomy of Application Profiles
> 4.5.4.3 ff Principles for the Taxonomy of Formats
>   and Prepresentation Profiles

The workshops, as the main submitters of these taxonomies, are requested to prepare suitable material for each application area where no text exists (see DTR 10000-2.3, SGFS N599), or the original rationale cannot be traced.

As it is intended to submit the revised Technical Report for SGFS ballot ending October 1992, new text should be available for circulation to SGFS members with the summary of voting, so that the ballot resolution process can incorporate the new material.
