

TITLE: Progression of TR 10000-1 and creation of TR 10000-3
SOURCE: ISO/IEC JTC1/SGFS
DATE: June 1992
STATUS: Editors' Instructions

The Editor of TR 10000-1 is instructed to amend WDTR 10000-1.3 (N442) using the Disposition of Comments document (N618). In addition, material submitted to SGFS and developed at the Washington meeting should be taken into account. (For instance: N535R, N536, N585). Any additional material provided by NBs and LOs during the period while editing is taking place should be included in this process if possible. The commentary on SGFS issues (N624 - progression of SGFS N432 and N439) includes further input and suggestions for amendment and development.

The text will be aligned with the final text of TR 10000-1.2, where appropriate.

The structure of TR 10000 will be as defined in N608

This work will be done in parallel with the creation of the first working draft of TR 10000-3 (for OSE Profiles). The editor of TR 10000-3 is instructed to create a first working draft, using similar material to that identified above for TR 10000-1. The two Editors will liaise on the transfer of material from N442, and on the development of common terminology and resolution of boundary issues.

The objective is to create new Working Drafts by October 1992 which can be used as the basis for ongoing discussion in SGFS and among its members, especially in the Authorised Subgroup Meeting in December 1992. Further progression of these drafts will be as decided in Washington Resolution 12 (N626).
