GB	Page 19 lines 7-9	11.1		te	The bullet added to 6.5.15#3 appears intended to disallow conditional expressions mixing decimal and standard floating types. However, because such expressions are covered under the existing bullet "both operands have arithmetic type", it fails to achieve the desired effect.	Instead of adding a bullet, add a new paragraph after paragraph 3: "If either operand has decimal floating type, the other operand shall not have standard floating type, complex type, nor imaginary type." (i.e. the same as added to 6.5.16.2).	Agree, with change in new wording: "If either of the second or third operands has decimal floating type, the other operand shall not have standard floating type, complex type, or imaginary type."
