Summary of open Issues

27.4.3 ios_base
Active 27-108 cin, cout … construction and initialization (Box)
Active 27-109 Can iword and pword fail, and if so how

27.4.4 basic_ios
Active 27-205 imbue should not call rdbuf( )->pubimbue
Active 27-207 availability of char_traits in header ios (Box)
Active 27-209 imbueing getloc()::codecvt into the argument stream buffer (Box)

27.6.1 basic_istream
Active 27-413 sentence missing (Box)

27.8 fstreams
Active 27-805 filebuf::imbue semantics
Active 27-814 basic_filebuf::imbue has no description

Miscellaneous
Active 27-922 Cleaning the iostreams header synopsis #include of other header
Summary of closed Issues

27.4.2 ios_traits

Closed 27-001 Making newline locale aware (Stockholm)
Closed 27-002 is_whitespace inconsistent (Stockholm)
Closed 27-003 Mention of base struct string_char_traits (Tokyo)
Closed 27-004 example of changing the behavior of is_whitespace is incorrect (Stockholm)
Closed 27-005 not_eof specification (Stockholm)
Closed 27-006 streamsize should be \texttt{SZ\_T} not \texttt{INT\_T} (Tokyo)
Closed 27-007 ios_traits typedefs are ‘char’ oriented (Stockholm)
Closed 27-008 ios_traits::length is missing \textbf{Returns:} clause (Stockholm)
Closed 27-009 ios_traits::get_state should be specified (Stockholm)
Closed 27-010 ios_traits::get_pos should be specified (Stockholm)
Closed 27-011 Return type for ios_traits::copy is incorrect (Stockholm)

27.4.3 ios_base

Closed 27-101 ios_base manipulators (Santa-Cruz)
Closed 27-102 ios_base::width semantics are incorrect (Santa-Cruz)
Closed 27-103 proposal for adding ios_base::maxwidth (Santa-Cruz)
Closed 27-104 ios_base unitbuf and nounitbuf manipulators (Santa-Cruz)
Closed 27-105 ios_base storage functions are not exception safe (Santa-Cruz)
Closed 27-106 Init class should be an implementation detail (Stockholm)
Closed 27-107 ios::failure doesn’t have the same functionality (Stockholm)

27.4.4 basic_ios

Closed 27-201 remove throw specifications for clear and setstate (Tokyo)
Closed 27-202 tie not required to be associated with an input sequence (Tokyo)
Closed 27-203 operator bool( ) needs to be fixed (Stockholm)
Closed 27-204 replace int_type by char_type in int_type fill( ) and int_type fill( int_type ) (Tokyo)
Closed 27-206 clear( ) should not unconditionally clear the error state (Stockholm)
Closed 27-208 move member functions from basic_ios to ios_base (Box) (Stockholm)

27.5.2 basic_streambuf

Closed 27-301 imbuing on streambufs. When, how often, etc... (Stockholm)
Closed 27-302 sungetc has an incorrect return type (Tokyo)
Closed 27-303 not_eof needs to be used where appropriate (Santa-Cruz)
Closed 27-304 uflow needs editing (Santa-Cruz)
Closed 27-305 basic_streambuf::showmanyc Incorrect return clause (Santa-Cruz)
Closed 27-306 basic_streambuf::uflow has incorrect default behavior (Santa-Cruz)
Closed 27-307 basic_streambuf::uflow has nonsense returns clause (Santa-Cruz)
Closed 27-308 streambuf inlines (Santa-Cruz)
Closed 27-309 two return clauses for streambuf::underflow (Santa-Cruz)
Closed 27-310 streambuf::backfail has incorrect \textbf{Notes:} clause (Santa-Cruz)
Closed 27-311 caching results of calls to locale functions (Santa-Cruz)
Closed 27-312 sync does not say what happens to the input sequence (Box) (Stockholm)
27.6.1 basic_istream

Closed 27-401 isfx what does it do? (Santa-Cruz)
Closed 27-402 ipfx example is incorrect (Santa-Cruz)
Closed 47-403 Clarification of exceptions thrown (Santa-Cruz)
Closed 27-404 istream functions need to check for NULL streambuf (Stockholm)
Closed 27-405 confusing English in formatted requirements (Stockholm)
Closed 27-406 operator>>(char_type *) failure (Stockholm)
Closed 27-407 operator>>(char_type) failure (Stockholm)
Closed 27-408 ws manipulator (Stockholm)
Closed 27-409 unsigned short extractors cannot use unsigned long get function (Stockholm)
Closed 27-410 putback function has wrong description (Stockholm)
Closed 27-411 getline should not set failbit when reading no characters (Stockholm)
Closed 27-412 operator>>(basic_streambuf *sb), should not set badbit if sb is null (Stockholm)
Closed 27-414 readsome, putback and unget need to check for good (Box) (Stockholm)
Closed 27-415 streampos need to be replaced (Box) (Stockholm)

27.6.2 basic_ostream

Closed 27-501 op<<(char) needs to be consistant with the other formatted inserters (Stockholm)
Closed 27-502 op<<(void *) should it be const volatile void * (Santa-Cruz)
Closed 27-503 ostream functions need to check for NULL streambuf (Stockholm)
Closed 27-504 exceptions in ostream (Santa-Cruz)
Closed 27-505 incorrect conversion specifier for operator<<(unsigned long) (Stockholm)
Closed 27-506 wrong default behavior for padding (Stockholm)

27.6.1-27.6.2 basic_istream, basic_ostream

Closed 27-601 op[<<|>>](ios_base&) needed for manipulators (Stockholm)
Closed 27-602 positional typedefs in istream/ostream derived classes are not needed (Stockholm)
Closed 27-603 read/write should take a void * instead of a char_type * (Stockholm)
Closed 27-604 Should we require ios::in to be set for istream’s and ios::out to be set for ostream’s? (Stockholm)
Closed 27-605 Should get/put use iterators? (Stockholm)
Closed 27-606 seekg and seekp should have their first parameter passed by value. (Stockholm)
Closed 27-607 locale getnum needed for void* extractor (Box) (Stockholm)

27.6.3 Standard manipulators

Closed 27-651 setfill description is wrong (Stockholm)
Closed 27-652 smanip is not a single type (Stockholm)

27.7 string streams

Closed 27-701 str() needs to clarify return value on else clause (Stockholm)
Closed 27-702 string stream classes need to have string_char_traits and allocator parameters (Stockholm)
Closed 27-703 stringbuf postconditions (Stockholm)
Closed 27-704 stringbuf::stringbuf constructor (Stockholm)
Closed 27-705 Incorrect calls to setg and setp in Table 14 (Stockholm)
Closed 27-706 Incorrect calls to setg and setp in table 16 (Stockholm)
Closed 27-707 setbuf function is missing (Stockholm)
27.8 fstreams

Closed 27-801 filebuf::underflow example is incorrect (Stockholm)
Closed 27-802 filebuf::is_open is a bit confusing (Stockholm)
Closed 27-803 ofstream constructor missing trunc as openmode (Stockholm)
Closed 27-804 ofstream::open missing trunc in openmode (Stockholm)
Closed 27-806 filebuf::seekoff Effects: clause needs work (Stockholm)
Closed 27-807 filebuf::underflow performance questions (Stockholm)
Closed 27-808 Editorial fixes in wording for fstreams (Stockholm)
Closed 27-809 description of function setbuf is missing (Stockholm)
Closed 27-810 openmode notation is not consistent in basic_ifstream and basic_ofstream (Stockholm)
Closed 27-811 description of function sync is missing (Stockholm)
Closed 27-812 filebuf::overflow example is incorrect (Stockholm)
Closed 27-813 basic_filebuf::overflow does not specifies its return value on success (Stockholm)
Closed 27-815 description of function seekpos is missing (Stockholm)
Closed 27-816 (i)(o)fstream open functions should not use is_open (Stockholm)

Miscellaneous

Closed 27-901 input/output of unsigned char, and signed char (Stockholm)
Closed 27-902 default locale (Santa-Cruz)
Closed 27-903 ipfx/opfx/isfx/osfx not compatible with exceptions (Santa-Cruz)
Closed 27-904 iosfwd declarations incomplete (Stockholm)
Closed 27-905 iostream type classes are missing (Santa-Cruz)
Closed 27-906 add a typedef to access the traits parameter in each stream class (Stockholm)
Closed 27-907 Use of “instance of” vs. “version of” in descriptions of class ios (Stockholm)
Closed 27-908 unnecessary ‘;’ (semicolons) in tables (Stockholm)
Closed 27-909 Editorial issues (typo’s) (Stockholm)
Closed 27-910 remove streampos in favor of pos_type (Stockholm)
Closed 27-911 stdio synchronization (Stockholm)
Closed 27-912 removing Notes: from the text (Stockholm)
Closed 27-913 Incorporating Notes: into the text (Stockholm)
Closed 27-914 rethrowing exceptions (Stockholm)
Closed 27-915 The use of specialization (Stockholm)
Closed 27-916 missing descriptions of specializations (Stockholm)
Closed 27-917 Editorial changes (Stockholm)
Closed 27-918 Validity of OFF_T to POS_T conversion (Stockholm)
Closed 27-919 Question on Table 2 assertions (Stockholm)
Closed 27-920 destination of clog and wclog (Stockholm)
Closed 27-921 default locale argument to constructor (Stockholm)

Annex D

Closed 27-1001 description of function setbuf is not sufficient (Stockholm)
Closed 27-1002 strstreambuf Editorial issues (Stockholm)
Closed 27-1003 istrstream Editorial issues (Stockholm)
Closed 27-1004 ostrstream Editorial issues (Stockholm)
ios_base issues

Issue Number: 27-108
Title: cin, cout … construction and initialization (Box)
Section: 27.3 Standard iostream objects [lib.iostream.objects]
Status: active
Description:
The standard iostreams objects (cin, cout, cerr, clog, wcin, wcout, wcerr, wclog) need to be constructed and associations established before dynamic initialization of file scope variables is begun.

Possible Resolution:

Requestor: pre-Stockholm Iostreams WG

Issue Number: 27-109
Title: Can iword and pword fail, and if so how
Section: 27.4.3.4 ios_base storage functions [lib.iostreams_base.storage]
Status: active
Description:
Can iword and pword fail, and if so how (throw bad_alloc and/or set a bit.)

Possible Resolution:

Requestor: Jerry Schwarz (jss@a.crl.com)

basic_ios issues

Issue Number: 27-205
Title: imbue should not call rdbuf( )->pubimbue
Section: 27.4.4.2 Member functions [lib.basic.ios.members]
Status: active
Description:
basic_ios::imbue(const locale&) should call rdbuf( )->pubimbue(loc) only if rdbuf( ) is not a null pointer. Even better, it should not call rdbuf( )->pubimbue(loc) at all. Changing the locale that controls stream conversions is best separated from changing the locale that affects numeric formatting, etc. Anyone who knows how to imbue a proper pair of codecvt facets in a streambuf won’t mind having to make an explicit call.

Possible Resolution:
The first part of the issue has already been resolved, the description of function locale imbue(const locale& loc) says:
**Effects:** Calls `ios_base::imbue(loc)` (27.4.3.3) and if `rdbuf()` != 0 then `rdbuf()->pubimbue(loc)` (27.5.2.2.1).

Concerning the second part you have two possibilities:

If we leave the `basic_ios::imbue` function unchanged, when users call the `imbue` function from `basic_istream`, `basic_ostream` or the classes derived from them, they are actually changing both the locale of the stream object, and the locale of the stream buffer object attached to the stream object. This is not a real problem, because the stream object is only affected by the `ctype`, `num_get`, `num_put`, and `numpunct` facets, while the stream buffer object is affected by the `codecvt` facet. Therefore, even if you want to have several stream pointing to the same stream buffer objects (with a different locale object for each of them), you can easily do it by having all the different stream locale objects having the same `codecvt` facet. You could also do it by imbuing the stream buffer at last. The advantage of this scheme is that in simple cases you need to imbue just once in the stream object without having to wonder about the stream buffer object attached to it. The drawback is that you need to be more careful when you imbue in a stream object, and make sure that the locale object you are imbuing contains the correct `codecvt` facet; otherwise, you need to imbue the stream buffer object attached to the stream with another locale.

The other possibility is to remove the call to `rdbuf()->pubimbue(loc)`, in which case you just imbue the stream object itself. The problem is that in simple cases you need to imbue both the stream object and the stream buffer attached to it. The advantage is you only imbue the object that needs to have a change of locale.

This issue has to be treated with issue 27-209.

**Title:** availability of `char_traits` in header `ios` (Box)

**Section:** 27.4.2 Template struct `ios_traits` [lib.ios.traits]

**Status:** active

**Description:**

The `ios_traits` was previously defined in header `ios`. Character traits have now been consolidated into `char_traits` defined in the string header. Should they still be available after a `#include <ios>`?

**Possible Resolution:**

<table>
<thead>

**Title:** imbueing `getloc()::codecvt` into the argument stream buffer (Box)

**Section:** 27.4.4.2 Member functions [lib.basic.ios.members]

**Status:** active

**Description:**

The first Box of section 27.4.4.2 says:

Note: need to modify so as to describe the occurrence of imbueing `getloc()::codecvt` into the argument stream buffer.
Possible Resolution:

Requestor: pre-Stockholm Iostreams WG

---

### basic_istream issues

**Issue Number:** 27-413  
**Title:** sentence missing (Box)  
**Section:** 27.6.1.1 Template class basic_istream [lib.istream]  
**Status:** active  
**Description:**

X3J16/95-0149==WG21/N0749 deleted a sentence that prevented the formatted and unformatted input functions from calling other streambuf virtuals (such as seek).

Possible Resolution:

Requestor: pre-Stockholm Iostreams WG

---

### file stream issues

**Issue Number:** 27-805  
**Title:** filebuf::imbue semantics  
**Section:** 27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals]  
**Status:** active  
**Description:**

basic_filebuf::imbue has silly semantics. Whether or not sync() succeeds has little bearing on whether you can safely change the working codecvt facet. The most sensible thing is to establish this facet at construction. (Then pubimbue and imbue can be scrubbed completely.) Next best is while is_open() is false. (Then imbue can be scrubbed, since it has nothing to do.) Next best is to permit any imbue that doesn't change the facet or is at beginning of file. Next best is to permit change of facet any time provided either the current or new facet does not mandate state-dependent conversions. (See comments under seekoff.)

Possible Resolution:

In my current version of the WP, I do not have any description for the virtual filebuf imbue function. See issue 27-814.

Requestor: Public Comment

---

**Issue Number:** 27-814  
**Title:** basic_filebuf::imbue has no description  
**Section:** 27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals]  
**Status:** active
Description:

The virtual function basic_filebuf:imbue has no description.

Possible Resolution:

Requestor: Philippe Le Mouël (philippe@roguewave.com)

---

### Miscellaneous issues

**Issue Number:** 27-922  
**Title:** Cleaning the iostreams header synopsis #include of other headers  
**Section:** Chapter 27 and Annex D  
**Status:** active  
**Description:**

Several public comments pointed out that the C++ header synopsis #include of other C++ headers were not correct.

**Possible Resolution:**

Add to header `<iostream>` synopsis: `<istream>` and `<ostream>`  
Add to header `<sstream>` synopsis: `<string>` (already brought by locale)  
Add to header `<streambuf>` synopsis: `<locale>`  
Add to header `<strstream>` synopsis: `<streambuf>`

**Requestor:** Judy Ward
**ios_traits issues**

**Issue Number:** 27-001  
**Title:** changing traits::newline to be locale aware  
**Section:** 27.4.2.1 `ios_traits value functions [lib.ios.traits.values]`  
**Status:** closed  
**Description:**

The problem with traits::newline is that it does not know about the currently imbued locale.

**Possible Resolution:**

The pre-Stockholm Iostreams WG recommends changing the description of functions `get` and `getline` so there are two variants instead of one with a default argument. Nathan Myers will provide text for the proposal.

Issue closed as described in paper WG21/N0954R1=X3J16/96-0136R1.

**Requestor:** Nathan Myers (ncm@cantrip.org), John Hinke (hinke@roguewave.com)

---

**Issue Number:** 27-002  
**Title:** traits::is_whitespace() is inconsistent  
**Section:** 27.4.2.2 `ios_traits test functions [lib.ios.traits.tests]`  
**Status:** closed  
**Description:**

This function is inconsistent throughout the document. For example:

**27.4.2 Template struct ios_traits [lib.ios.traits]**

```cpp
static bool is_whitespace(int_type, const ctype<char_type>&);
```

**27.4.2.2 ios_traits test functions [lib.ios.traits.tests]**

```cpp
bool is_whitespace(int_type c, const ctype<char_type>& ct);
```

**Returns:** true if `c` represents a white space character. The default definition is as if it returns `ct.isspace(c)`.

The returns paragraph calls a method of ctype that does not exist. It should say:

**Returns:** true if `c` represents a white space character. The default definition is as if it returns `ct.is(c.space, c)`.

**27.6.1.1.2 basic_istream::ipfx [lib.istream.prefix]**

Notes: ...uses the function

```cpp
bool traits::is_whitespace(charT, const ctype<charT>&);
```

The same paragraph goes on to use `ctype<...>` in the example.
static bool is_whitespace(char, const ctype<char>&)

**Possible Resolution:**

The Santa Cruz meeting, deprecates the is_whitespace function, by accepting doc: 96-0036R1=N0854R1 (Unification of Traits Revision1). Therefore the issue is closed with no action.

**Requestor:**
John Hinke (hinke@roguewave.com)
Philippe Le Mouël (philippe@roguewave.com)

**Issue Number:** 27-004
**Title:** example of changing the behavior of is_whitespace is incorrect.
**Section:** 27.6.1.1.2 Paragraph 4 basic_istream prefix and suffix [lib.istream.prefix]
**Status:** closed

**Description:**
Change from:

```cpp
struct my_char_traits : public ios_traits<char> {
    static bool is_whitespace(char c, const ctype<char>& ct)
    { ...
```

To:

```cpp
struct my_char_traits : public ios_traits<char> {
    static bool is_whitespace(char c, const ctype<char>& ct)
    { ...
```

**Possible Resolution:**

The Santa Cruz meeting, deprecates the is_whitespace function, by accepting doc: 96-0036R1=N0854R1 (Unification of Traits Revision1). Therefore the issue is closed with no action.

**Requestor:**
John Hinke (hinke@roguewave.com)

**Issue Number:** 27-005
**Title:** not_eof specification
**Section:** 27.4.2.1 ios_traits value functions [lib.ios.traits.values]
**Status:** closed

**Description:**
```cpp```
int_type not_eof(int_type c);
```cpp```

Editorial: “Notes” should also mention it is used for sbumpc and sgetc.

Per Bothner writes: “The Returns: is incompatible with the traditional masking function for zapeof. This is because int_type(-2) == -2 while zapeof(-2) == ((-2) & 0xFF). And nowhere else does it say anything that would allow the traditional implementation.”
“I don’t understand the presentation style well enough to suggest the proper fix. But somewhere it should say or imply that when charT is specialized with char, then not_eof(c) is int_type((unsigned char)(c)).”

Possible Resolution:

The pre-Stockholm Iostreams WG recommends changing the specification of function not_eof. It has to yield a value which is not equal to eof. The value is unspecified. (The current WP requires that not_eof(e)==e if e!=eof(), and forces a change from existing practice. The recommendation allows existing implementation to remain unchanged.) Tom Plum will provide text for the proposal.

Issue closed as described in paper WG21/N0930==X3J16/96-0122.

Possible Resolution:

The Santa Cruz meeting, fixes the problem, by accepting doc: 96-0036R1=N0854R1 (Unification of Traits Revision1). Therefore the issue is closed with no action.

We cannot specify int_type, off_type, pos_type, and state_type corresponding to some specialized charT type.

For example, if in order to think about ‘char’ specialization, we might define

```cpp
template <class charT> struct ios_traits {
  ....
  typedef charT char_type;
  typedef int int_type;
  ....
};
```

we would have to accept it as constant definition in all of the specialized traits, not only ios_traits<char>, but ios_traits<wchar_t>, ios_traits<ultrachar>. This would lead to the restriction upon implementations that all of the charT must be converted in ‘int’ range. The restriction is too heavy for future wide character types and user-defined character types.

Possible Resolution:

The Santa Cruz meeting, fixes the problem, by accepting doc: 96-0036R1=N0854R1 (Unification of Traits Revision1). Therefore the issue is closed with no action.

```cpp
ios_traits::length has an Effects: clause but no Returns: clause. The Effects: clause should be reworded as a Returns: clause.
```
Possible Resolution:

The Santa Cruz meeting, fixes the problem, by accepting doc: 96-0036R1=N0854R1 (Unification of Traits Revision1). Therefore the issue is closed with no action.

Requestor: Public Comment

Issue Number: 27-009
Title: definition for get_state
Section: 27.4.2.3 ios_traits conversion functions [lib.ios.traits.convert]
Status: closed
Description:

The definition of `ios_traits::get_state` is incomplete. Here is the complete description:

```cpp
state_type get_state(pos_type pos);
```

Returns: A `state_type` value which represents the conversion state in the object `pos`.

Possible Resolution:

No consensus was reached on this issue by the pre-Stockholm Iostreams WG.

This function is removed by paper WG21/N0957R1==X3J16/96-0139R1 proposal A. Therefore the issue is closed with no action.

Requestor: Norihiro Kumagai (kuma @ slab.tnr.sharp.co.jp)

Issue Number: 27-010
Title: definition for get_pos
Section: 27.4.2.3 ios_traits conversion functions [lib.ios.traits.convert]
Status: closed
Description:

The definition of `ios_traits::get_pos` is incomplete. Here is the complete description:

```cpp
pos_type get_pos(streampos pos, state_type s);
```

Effects: Constructs a `pos_type` value which represents the stream position corresponding to the pair of `pos` and `s`.

Returns: A `pos_type` value which consists of the values of `pos` and `s`.

Possible Resolution:

No consensus was reached on this issue by the pre-Stockholm Iostreams WG.

This function is removed by paper WG21/N0957R1==X3J16/96-0139R1 proposal A. Therefore the issue is closed with no action.

Requestor: Norihiro Kumagai (kuma @ slab.tnr.sharp.co.jp)
Issue Number: 27-011
Title: Return type for \texttt{ios\_traits::copy} is incorrect
Section: 27.4.2.3 \texttt{ios\_traits} conversion functions [lib.ios.traits.convert]
Status: closed
Description:

The return type for \texttt{ios\_traits::copy} says to return \texttt{dst}. It should return \texttt{dest}.

Possible Resolution:

The Santa Cruz meeting, fixes the problem, by accepting doc: 96-0036R1=N0854R1 (Unification of Traits Revision1). Therefore the issue is closed.

Requestor: John Hinke (hinke@roguewave.com)

Title: operator bool() needs to be fixed
Section: 27.4.4.3 basic_ios iostate flags functions [lib.iostate.flags]
Status: closed
Description:

Defining ios_base (or, as it appears in my copy of the WP, basic_ios) with a member operator bool() seemed like a good idea at the time, but perhaps the change should be withdrawn.

The reason is: while a conversion to void* is mostly harmless because few functions accept a void* argument, and void* doesn't silently convert to anything else, with an operator bool, the following absurdities are well-defined:

```
1 + cin
sin(cin)
vector<int> v(cin);
```

and (worse) ambiguities like

```
void f(istreambuf_iterator<char>);
void f(double);

f(cin);   // ambiguous
```

have been introduced. In other words, this change broke reasonable code. The problem is that bool is an arithmetic type, and is ill-behaved.

Possible Resolution:

Replace the member ios_base::operator bool() with member
ios_base::operator const void*(), specified to return 0 if fail() is true, and non 0 if it is false.
This restores the code we broke, and also prevents frustrating ambiguities in new code.

Issue closed as described above.

**Requestor:** Nathan Myers (ncm@cantrip.org)

**Issue Number:** 27-206  
**Title:** clear() should not unconditionally clear the error state  
**Section:** 27.4.4.3 basic_ios iostate flags functions [lib.iostate.flags]  
**Status:** closed  
**Description:**

Problem: `clear()` can be used to unconditionally clear the error state, even if `rdbuf()`, returns null. The stream then appears to be in a good state, which is wrong.

**Possible Resolution:**

The function `clear()` should set badbit (independent of its argument) if `rdbuf()` returns null.

Issue closed as described in paper X3J16/96-0128==WG21/N0946.

**Requestor:** Pre-Stockholm Iostreams WG

**Issue Number:** 27-208  
**Title:** move member functions from basic_ios to ios_base (Box)  
**Section:** 27.4.3 Class ios_base [lib.ios.base]  
**Status:** closed  
**Description:**

Move the following declarations from basic_ios to ios_base:

```cpp
// 27.4.4.3 iostate flags:
operator bool() const
bool operator! () const

iostate rdstate() const
void clear (iostate state = goodbit)
void setstate(iostate state)
bool good() const
bool eof() const
bool fail() const
bool bad() const

ios_base& copyfmt (const ios_base& rhs)
```

Note that there will be a version of `copyfmt()` specified for basic_ios.

Note: void clear (iostate state = goodbit) and void setstate(iostate state) should not be moved see issue 27-206.

**Possible Resolution:**

Issue closed as described in paper X3J16/96-0128==WG21/N0946.
basic_streambuf issues

Issue Number: 27-301
Title: imbuing on streambufs: when, how often, etc...
Section: 27.5.2.2.1 Locales [lib.streambuflocales]
Status: closed
Description:

There needs to be something said as to when a new locale can be imbued into a streambuf or stream. Which operations are considered “atomic” in regards to locale changes.

Possible Resolution:

Nathan wrote:

“The effect of calling imbed during activation of any member of a class derived from basic_ios<>, or of any operator << or >> in which the class is the left argument, is unspecified. In particular (e.g.) any codeset conversion occurring in the streambuf may become incompatible with the formats specified by the old locale and still used.

The effect of calling streambuf::imbue or pub_imbue during activation of any streambuf virtual member is also undefined.”

The pre-Stockholm Iostreams WG recommends that no standard function defined in Chapter 27 calls imbue directly, except for the imbue function. If any user code (e.g. if called via a virtual function) calls imbue during the execution of any of these functions, the effect is undefined.

Issue closed as described in paper WG21/N0954R1==X3J16/96-0136R1.

<tr>
<td>Description:</td>
<td>Functions in basic_istream that call members of rdbuf() need to check for a NULL streambuf before calling the function. There are some functions that make sure rdbuf() is not a NULL pointer before calling any functions on the buffer, but some functions don’t check for the NULL pointer. This needs to be consistent.</td>
</tr>
</tbody>
</table>

Discussion:

P.J. Plauger wrote: “Any attempt to store a null stream buffer pointer causes badbit to be set in the stored status. Hence, no input or output is ever attempted, using such a pointer, by formatted functions.”

Possible Resolution:

As pointed out by P.J. Plauger, we should add a footnote to explain why there is no need to check for a NULL streambuf.

We should also add, in section 27.4.4.2 Member functions [lib.basic.ios.members], the following to the description of basic_streambuf<charT,traits>*
rdbuf(basic_streambuf<charT,traits>* sb); :

Postcondition: sb == rdbuf() and if sb is a NULL pointer rdstate() == badbit.

Note: This issue has to be discussed with issue 27-503.

The pre-Stockholm Iostreams WG recommends the issue to be treated as editorial. It needs to be pointed out where the check is not necessary. In places where check is required, recommend add the check.

Issue closed as described in paper X3J16/96-0140==WG21/N0958.

the imbued locale object." This is really French converted to English by translation software, right? :->}

Possible Resolution:

Issue closed since the rewrite of the section fixed this problem.

Requestor: Public Comment

Issue Number: 27-406
Title: operator>>(char_type *) failure
Section: 27.6.1.2.2 basic_istream::operator>> [lib.istream::extractors]
Status: closed
Description:

27.6.1.2.2 [lib.istream:extractors]: Paragraph 2: "If the function stores no characters, it calls setstate(failbit), which may throw ios_base::failure (27.4.4.3). In any case, it then stores a null character ...." How can it store anything if an exception is thrown? C++ does not use the resumption model for exception handling. Different language than "In any case" is needed here.

Possible Resolution:

Change paragraph 2 to:
“If the function stores no characters, it calls setstate(failbit), which may throw ios_base::failure (27.4.4.3).”

Add paragraph 3:
“Before returning or throwing an exception the function stores a null character into the next successive location of the array and calls width(0).”

Issue closed as described in paper X3J16/96-0140==WG21/N0958.

Requestor: Public Comment

Issue Number: 27-407
Title: operator>>(char_type) failure
Section: 27.6.1.2.2 basic_istream::operator>> [lib.istream::extractors]
Status: closed
Description:

basic_istream<charT,traits>& operator>>(char_type& c);
Effects: Extracts a character, if one is available, and stores it in c. Otherwise, the function calls setstate(failbit).

Not eofbit?

Possible Resolution:

In 27.6.1.2.1 Common requirements [lib.istream.formatted.reqmts] paragraph 8 says:

“If the scan fails for any reason, the formatted input function calls setstate(failbit), which may throw ios_base::failure (27.4.4.3).”
This is one of the requirements for all the formatted input functions. Because of this the user can call the ios_base member function fail( ) or the operator bool( ) to check if the extraction failed. The user can therefore write code like this:

The pre-Stockholm Iostreams WG recommends closing the issue since the definition of “extract” (27.6.1.1) covers setting eof.
Note: footnotes could be added referring to that section. (Editorial)
Issue closed as described above.

Requestor: Public Comment

| Issue Number | 27-410 |
Title: putback function has wrong description
Section: 27.6.1.3 Unformatted input functions [lib.istream.unformatted]
Status: closed
Description:

The description of the putback function is incorrect.

Possible Resolution:

The complete description of the function should be:

basic_istream<
cahrT,traits>& putback(char_type c);

Effects: If rdbuf( ) is not null, calls rdbuf( )->sputbackc( c ). If rdbuf( ) is null, or if sputbackc( c )
returns traits::eof( ), calls setstate(badbit) ( which may throw ios_base::failure (27.4.4.3)).

Returns: *this.

Issue closed as described in paper X3J16/96-0140==WG21/N0958.

Requestor: Philippe Le Mouël (philippe@roguewave.com)

--

Title: getline should not set failbit when reading no characters
Section: 27.6.1.3 Unformatted input functions [lib.istream.unformatted]
Status: closed
Description:

When the function getline is called and the stream has a line that contains no text,
ios_base::failbit is set on the input stream (which may throw ios_base::failure). While consistent
with the behavior of the similar function named get, the behavior is quite inconvenient.
Furthermore, I tested this behavior on the AT&T Release 3.0 implementation of Iostreams and I
did not encounter the problem described above. The same comment also apply to the string’s
getline function described in section 21.1.1.10.8 Inserters and extractors [lib.string.io].

Possible Resolution:

The pre-Stockholm Iostreams WG recommends changing the WP, if it does not say:
getline fails if no characters are extracted. An empty line is not a failure.

Issue closed as described in paper X3J16/96-0140==WG21/N0958.

Requestor: Public Comment

--

Title: operator >> (basic_streambuf *sb), should not set badbit if sb is null
Section: 27.6.1.2.2 basic_istream::operator >> [lib.istream::extractors]
Status: closed
Description:

basic_istream::operator>>(basic_streambuf *sb) now says, "If sb is null, calls setstate(badbit)."
This requirement was added without committee approval. It is also inconsistent with the
widespread convention that badbit should report loss of integrity of the stream proper (not some
other stream). A null sb should set failbit.
Possible Resolution:

The pre-Stockholm Iostreams WG recommends setting failbit not badbit.

Issue closed as described in paper X3J16/96-0140==WG21/N0958.

basic_ostream issues

Issue Number: 27-501
Title: ostream<<(char) : formatting, padding, width
Section: 27.6.2.4.2 basic_ostream::operator<<( [lib.ostream.inserters]
Status: closed
Description:

For historical reasons, this function has usually ignored padding and formatting. In the WP, it does not mention anything about ignoring padding or formatting. This needs to be clarified.
Reasons for ignoring padding on `op<<(char)

1. Historical reasons/compatibility

Reasons for full formatting on `op<<(char)

1. `put(char)` currently does no formatting. But there is no way to insert a char with formatting.
2. Some implementations do formatting.

Since `put` can insert a character without formatting, there needs to be a way to insert a character with formatting. Currently this does not exist. It would be nice not to introduce an inconsistency with the other formatted inserters, but it would also be nice to provide compatibility. I think that consistency would be much better in this case than compatibility.

**Possible Resolution:**

At the Tokyo meeting the straw vote gave the following result:

5 for past practice (no padding), 1 for consistency.

Issue closed as described in paper WG21/N0964==X3J16/96-0146 (padding).

**Requestor:**
John Hinke (hinke@roguewave.com),
Bernd Eggink (admin@rrz.uni-hamburg.de)

**Issue Number:** 27-503
**Title:** ostream functions need to check for NULL streambuf
**Section:** 27.6.2.1 Template class basic_ostream [lib.ostream]
**Status:** closed
**Description:**

Functions in basic_ostream that call members of rdbuf() need to check for a NULL streambuf before calling the function. There are some functions that make sure rdbuf() is not a NULL pointer before calling any functions on the buffer, but some functions don’t check for the NULL pointer. This needs to be consistent.

**Discussion:**

P.J. Plauger wrote: “Any attempt to store a null stream buffer pointer causes badbit to be set in the stored status. Hence, no input or output is ever attempted, using such a pointer, by formatted functions.”

**Possible Resolution:**

As pointed out by P.J. Plauger we should add a footnote to explain why there is no need to check for a NULL streambuf.

We should also add in section 27.4.4.2 Member functions [lib.basic.ios.members] the following to the description of basic_streambuf<

```
rbuf(basic_streambuf<
```

**Postcondition:** `sb == rdbuf()` and if `sb` is a NULL pointer `rdstate()` == badbit.
Note: This issue has to be discussed with issue 27-404.

The pre-Stockholm Iostreams WG recommends the issue to be treated as editorial. It needs to be pointed out where the check is not necessary. In places where check is required, recommend add the check.

Issue closed as editorial see paper X3J16/96-0140==WG21/N0958

**Requestor:** John Hinke (hinke@roguewave.com)

**Issue Number:** 27-505
**Title:** incorrect conversion specifier for operator<< (unsigned long)
**Section:** 27.6.2.4.2 basic_ostream::operator<<( [lib.ostream.inserters]
**Status:** closed
**Description:**

basic_ostream<charT,traits>& operator<<(unsigned long n);  
Effects: Converts the unsigned long integer n with the integral conversion specified preceded by l.  
Should this be "... preceded by ul.?"

**Possible Resolution:**

The rewrite of this section fixed the problem, therefore the issue is closed.

**Requestor:** Public Comment

**Issue Number:** 27-506
**Title:** wrong default behavior for padding
**Section:** 27.6.2.4.1 Common requirements Table 13 Fill padding [lib.ostream.formatted.reqmts]
**Status:** closed
**Description:**

27.6.2.4.1 Table13 Fill padding changes the long-standing default behavior for padding output field. It has always been true that setting none of left, right, and internal called for left padding (pad after text). Now it calls for right padding (pad before text). Since this is the initial state of all ios objects, many simple C++ programs will change behavior.

**Possible Resolution:**

The rewrite and moving discussion of fill padding to chapter 22 (Localization) fixed the problem, therefore the issue is closed.

**Requestor:** P.J. Plauger (plauger!pjp@uunet.uu.net)

---

**basic_istream/basic_ostream issues**

**Issue Number:** 27-601
Title: istream::operator>>(ios_base&), ostream::operator<<(ios_base&)
Section: 27.6.1.2.2 basic_istream::operator>> [lib.istream::extractors], 27.6.2.4.2 basic_ostream::operator<< [lib.ostream.inserters]
Status: closed
Description:

The ios_base manipulators 27.4.5.1 [lib.std.ios.manip] will not work as written. They won’t work because there is no conversion from ios_base to basic_ios.

They are currently declared as:

ios_base& boolalpha(ios_base&);

I propose adding a new insertor/extractor for istream and ostream that does insertion/extraction for ios_base.

Possible Resolution:

John wrote:

“Add to basic_istream:

basic_istream<
charT,
traits>
&
operator>>(
ios_base&
(*pf)(ios_base&));

Effects: Calls (*pf)(*this)
Returns: *this.

Add to basic_ostream:

basic_ostream<
charT,
traits>
&
operator<<(
ios_base&
(*pf)(ios_base&));

Effects: Calls (*pf)(*this)
Returns: *this.

Also, several footnotes will need to be changed.”

We need to change footnote 9 in 27.4.5.3 basefield manipulators [lib.basefield.manip] to:

“The function signature dec(ios_base& str) can be called by the function signature basic_ostream<
charT,traits>& basic_ostream<
charT,traits>::operator << ( ios_base& (*) (ios_base&)) to permit expressions of the form cout << dec to change the format flags stored in cout.”

Issue closed as proposed in paper X3J16/96-0128==WG21/N0946.

<tbody>
<tr>
<td>27-604</td>
<td>Opening an istream without ios::in set? or an ostream without ios::out set?</td>
</tr>
</tbody>
</table>
Section: 27.6.1.1 Template class basic_istream [lib.input.streams],
27.6.2.1 Template class basic_ostream [lib.output.streams]

Status: closed

Description:

Benedikt asks,

“Why can I open an istream without ios::in being set or an ostream without ios::out? I mean, I just did that by mistake with an ofstream and searched for quite a while to find out, why there were no actual writes to the newly created file.

“Or, even worse, why can I open an istream with ios::out (and no ios::in) being set and vice versa?

“Shouldn't the iostreams check whether the given mode flags make any sense, and maybe even add ios::in if you missed to set this in an istream, or ios::out if you used an ostream?”

Possible Resolution:

The pre-Stockholm Iostreams WG recommends that ctors/open for iXstream, oXstream always assumes the “in” or “out” bit. Ctors/open for Xstream (bidirectional) do not assume either “in” or “out” bits. Issue closed as described in paper X3J16/96-0126==WG21/N0944.

Requestor: Benedikt Erik Heinen (beh@tequila.oche.de)

Issue Number: 27-605
Title: get/put type functions should be able to use iterators.
Section: 27.6.1.3 Unformatted input functions [lib.istream.unformatted]
27.6.2.5 Unformatted output functions [lib.ostream.unformatted]
Status: closed
Description:

Several functions in istream and ostream take a pointer and a length and optionally a delimiter. It would be nice to add overloaded functions that take either InputIterators, or OutputIterators. These new functions would look like:

For basic_istream:

```cpp
template<class OutputIterator>
istream& get(OutputIterator begin, OutputIterator end, char_type delim);
```

The `begin` and `end` iterators define where the characters will be written. Characters will be read from the sequence until the `end` iterator is reached, or the next character is `delim`.

For basic_ostream:

```cpp
template<class InputIterator>
ostream& write(InputIterator begin, InputIterator end);
```

The `begin` and `end` iterators define the sequence of characters to be written.

These functions would be added to the current implementation. The current set of functions should not be removed. They are very commonly used. There are several functions which are candidates for these `begin` and `end` iterators. These functions are:
For basic_istream:

    istream& get(char_type *, streamsize, char_type);
    istream& getline(char_type *, streamsize, char_type);
    istream& read(char_type *, streamsize);

For basic_ostream:

    ostream& put(char_type *, streamsize);
    ostream& write(void *, streamsize);

Possible Resolution:

The pre-Stockholm Iostreams WG recommends closing the issue with no change to the WP. This is a proposed extension.

Requestor: Nathan Myers (ncm@cantrip.org)

Issue Number: 27-606
Title: seekg and seekp should have their first parameter passed by value.
Section: 27.6.1.3 Unformatted input functions [lib.istream.unformatted]
27.6.2.3 basic_ostream prefix and suffix functions [lib.ostream.prefix]
Status: closed
Description:

The following functions should have their first parameter passed by value as described in 27.6.1.1 Template class basic_istream [lib.istream] and 27.6.2.1 Template class basic_ostream [lib.ostream].

    basic_istream<charT,traits>& seekg(off_type& off, ios_base::seekdir dir);
    basic_ostream<charT,traits>& seekp(pos_type& pos);
    basic_ostream<charT,traits>& seekp(off_type& off, ios_base::seekdir dir);

The seekp functions should also be moved in section 27.6.2.5 Unformatted output functions [lib.ostream.unformatted].

Possible Resolution:

Change them to:

    basic_istream<charT,traits>& seekg(off_type off, ios_base::seekdir dir);
    basic_ostream<charT,traits>& seekp(pos_type pos);
    basic_ostream<charT,traits>& seekp(off_type off, ios_base::seekdir dir);

The pre-Stockholm Iostreams WG recommends treating the issue as editorial. Steve Clamage will provide text to make the declaration and definition agree to pass parameter by value.

</tr>
</tbody>
</table>

Possible Resolution:

The pre-Stockholm Iostreams WG deferred the issue to Stockholm.

The problem is which parameter type(s) should the setfill manipulator accept. Certainly charT, but what about char or int? Problem is lack of a correct implicit “widen” from char to charT, because the conversion requires knowledge of the locale.

Issue closed as described in paper WG21/N0964==X3J16/96-0146.

Requestor: P.J. Plauger (plauger@pjp@uunet.uu.net)
Philippe Le Mouël (philippe@roguewave.com)

## string stream issues

<table>
<thead>
<tr>
<th>Issue Number</th>
<th>27-701</th>
</tr>
</thead>
<tbody>
<tr>
<td>Title</td>
<td>basic_stringbuf::str() needs to clarify return value on else clause</td>
</tr>
<tr>
<td>Section</td>
<td>27.7.1.2 Member functions [lib.stringbuf.members]</td>
</tr>
<tr>
<td>Status</td>
<td>closed</td>
</tr>
<tr>
<td>Description</td>
<td>“Table 15 in [lib.stringbuf.members] describes the return values of basic_stringbuf::str(). What does the &quot;otherwise&quot; mean? Does it mean neither ios_base::in nor ios_base::out is set? What is the return value supposed to be if <em>both</em> bits are set?”</td>
</tr>
</tbody>
</table>

### Possible Resolution:

The pre-Stockholm Iostreams WG recommends defining a consistent model for stringstreams. Should stringbufs be more like filebufs or more like strstreams? Probably more like files. The String stream section needs a full review and possibly some rewriting to fit the model.

Issue closed as described in paper X3J16/96-0145=WG21/N0963.

**Requestor:**

<td>Description</td>
<td>The string streams are currently templatized on the character type (charT) and the traits type (ios_traits). String template parameters need to be added.</td>
</tr>
</tbody>
</table>

### Possible Resolution:

The Santa Cruz meeting, fixes the problem, by accepting doc: 96-0036R1=N0854R1 (Unification of Traits Revision1). But we are still left with the problem of taking or returning string arguments using an other allocator than the default one. See `basic_stringbuf`, `basic_istringstream`, `basic_ostringstream` and `basic_stringstream` constructors and `str` functions.
The pre-Stockholm Iostreams WG recommends defining a consistent model for stringstreams. Should stringbufs be more like filebufs or more like strstreams? Probably more like files. The String stream section needs a full review and possibly some rewriting to fit the model.

Issue closed as described in paper X3J16/96-0145= WG21/N0963.

| Title:       | setbuf function is missing |
| Section:     | 27.7.1 Template class basic_stringbuf [lib.stringbuf] |
| Status:      | closed |
| Description: | Steve Clamage wrote: “Section 27.7.1.3 should have a basic_stringbuf override of the base class setbuf() function, but it is missing.” |

Possible Resolution:

The pre-Stockholm Iostreams WG recommends the behavior of the setbuf function to be implementation-defined, except that setbuf(0,0) has no effect. The return type in the WP is correct.

Issue closed as described in paper X3J16/96-0126=WG21/N0944.

Requestor: Steve Clamage (stephen.clamage@eng.sun.com)
file stream issues

Issue Number: 27-801
Title: filebuf::underflow example
Section: 27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals]
Status: closed
Description:

The “as if” example for basic_filebuf::underflow has several “typos". It should say:

char from_buf[FSIZE];
char* from_end;
char to_buf[TSIZE];
char* to_end;
typename traits::state_type st;

codecvt_base::result r =
  getloc().template use<codecvt<char, charT,
typename traits::state_type> >().convert
  (st, from_buf, from_buf+FSIZE, from_end,
   to_buf, to_buf+TSIZE, to_end);

Possible Resolution:

We should correct the example as follows, and not as described above:

char from_buf[FSIZE];
char* from_end;
charT to_buf[TSIZE];
charT* to_end;
typename traits::state_type st;

codecvt_base::result r =
  use_facet<codecvt<char, charT, typename traits::state_type> >(getloc()).
  convert(st, from_buf, from_buf+FSIZE, from_end, to_buf, to_buf+TSIZE, to_end); 

Should be treated with issue 27-812.

The pre-Stockholm Iostreams WG recommends to treat the issue as editorial. The modifications have already been incorporated to the WP. Therefore the issue is closed with no further action.

Requestor: John Hinke (hinke@roguewave.com)

Issue Number: 27-802
Title: filebuf::is_open is a bit confusing
Section: 27.8.1.3 Member functions [lib.filebuf.members]
Status: closed
Description:

It says, "Returns: true if the associated file is available and open." What is the meaning of available? This seems a bit confusing.
Possible Resolution:

Change the **Returns**: statement to:

**Returns**: true after a successful call to the member function open, and before a successful call to member function close, otherwise false.

The pre-Stockholm Iostreams WG recommends accepting the above resolution.

Issue closed as described in paper X3J16/96-0140=WG21/N0958.

Public Comment

---

**Issue Number**: 27-806  
**Title**: filebuf::seekoff **Effects**: clause needs work
## Section: 27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals]

### Status: closed

### Description:

basic_filebuf::seekoff Effects is an interesting exercise in creative writing. It should simply state that if the stream is opened as a text file or has state-dependent conversions, the only permissible seeks are with zero offset relative to the beginning or current position of the file. (How to determine that predicate is another matter -- should state for codecvt that even a request to convert zero characters will return noconv.) Otherwise, behavior is largely the same as for basic_stringstream, from whence the words should be cribbed. The problem of saving the stream state in a traits::pos_type object remains unsolved. The primitives described for ios_traits are inadequate.

### Possible Resolution:

The pre-Stockholm Iostreams WG recommends accepting in principle the recommendations in the public comment. Eight bit streams behave like stdio FILEs. For wide streams, seeks are allowed provided the external file meets certain criteria to be worked out.

Issue closed as described in paper WG21/N0930==X3J16/96-0112.

### Requestor: Public Comment

### Issue Number: 27-807

### Title: filebuf::underflow performance questions

### Section: 27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals]

### Status: closed

### Description:

basic_filebuf::underflow is defined unequivocally as the function that calls codecvt, but there are performance advantages to having this conversion actually performed in uflow. If the specification cannot be broadened sufficiently to allow either function to do the translation, then uflow loses its last rationale for being added in the first place. Either the extra latitude should be granted implementors or uflow should be removed from basic_streambuf and all its derivatives.

### Possible Resolution:

The pre-Stockholm Iostreams WG recommends that filebuf overrides both uflow and underflow, instead of just underflow. Semantic are left as-is.

Issue closed as described in paper X3J16/96-0140==WG21/N0958.

### Requestor: Public Comment

### Issue Number: 27-808

### Title: Editorial fixes in wording for fstreams

### Section: 27.8.1 File streams [lib.fstreams]

### Status: active

### Description:

27.8.1 [lib.fstreams], paragraph 2: "... the type name FILE is a synonym for the type FILE." This seems like an odd sort of synonym, doesn’t it? Also, the last sentence of this subsection, "Because
of necessity of the conversion between the external source/sink streams and wide character sequences." is incomplete.

**Possible Resolution:**

The pre-Stockholm Iostreams WG recommends to treat the issue as editorial. Make clear that FILE is a typedef in C, but not necessarily in C++. The change as already been incorporated. Therefore the issue is closed with no further action.

**Requestor:** Public Comment

**Issue Number:** 27-809
**Title:** Description of function setbuf is missing
**Section:** 27.8.1.4 Overridden virtual functions [lib.filebuf.virtauls]
**Status:** closed
**Description:**

Steve Clamage wrote: “basic_filebuf version of setbuf( ) needs a description, and the return type shown in the draft is basic_streambuf*, which is probably wrong. It was correct before covariant return types were added to the draft. Now it should probably return basic_filebuf*.”

**Possible Resolution:**

The pre-Stockholm Iostreams WG recommends the behavior of the setbuf function to be implementation-defined, except that setbuf(0,0) if called before any I/O occurs on the stream, makes the stream unbuffered. The return type in the WP is correct.

Issue closed as described in paper X3J16/96-0126==WG21/N0944.

**Requestor:** Steve Clamage (stephen.clamage@eng.sun.com)

**Issue Number:** 27-810
**Title:** Openmode notation is not consistent in basic_ifstream and basic_ofstream
**Section:** 27.8.1.5 Template class basic_ifstream [lib.ifstream]
  27.8.1.8 Template class basic_ofstream [lib.ofstream]
**Status:** closed
**Description:**

basic_ifstream, basic_ofstream constructors and member functions open describe the type ios_base::openmode as openmode and its values as in and out rather than ios_base::in and ios_base::out as everywhere else in the library.

**Possible Resolution:**

In 27.8.1.5 Template class basic_ifstream [lib.ifstream] , 27.8.1.6 basic_ifstream constructors [lib.ifstream.cons] and 27.8.1.7 member functions [lib.ifstream.members] change the following functions:

explicit basic_ifstream(const char* s, openmode mode = in);

To:

explicit basic_ifstream(const char* s, ios_base::openmode mode = ios_base::in);

void open(const char* s, openmode mode = in);
to:
void open(const char* s, ios_base::openmode mode = ios_base::in);

In 27.8.1.8 Template class basic_ofstream [lib.ofstream] . 27.8.1.9 basic_ofstream
constructors [lib.ofstream.cons] and 27.8.1.10 member functions [lib.ofstream.members]
change the following functions:

explicit basic_ofstream(const char* s, openmode mode = out | trunc);
to:
explicit basic_ofstream(const char* s, ios_base::openmode mode = ios_base::out | ios_base::trunc);

void open(const char* s, openmode mode = out | trunc);
to:
void open(const char* s, ios_base::openmode mode = ios_base::out | ios_base::trunc);

The pre-Stockholm Iostreams WG recommends to treat as editorial. The “trunc” issue is handled by 27-803,804.

Issue closed as described in paper X3J16/96-0140==WG21/N0958.

Requestor: Philippe Le Mouël (philippe@roguewave.com)

| Issue Number: | 27-811 |
| Title: | Description of function sync is missing |
| Section: | 27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals] |
| Status: | closed |
| Description: | Description of the overridden sync( ) function in class basic_filebuf is missing. |

Possible Resolution:

The pre-Stockholm Iostreams WG recommends adapting wording from C standard for output. The intent
is clear, for in/out files, flush output then really seek to current file position. For input files,
implementation-defined.

Issue closed as described in paper X3J16/96-0112==WG21/N0930.

Requestor: Philippe Le Mouël (philippe@roguewave.com)

</tr>
</tbody>
</table>
Description:

(i)(o)fstream open functions should not use is_open to determine if the operation fails (and as a result setting failbit). The problem arises if you do not close the (i)(o)fstream and then try to open another file with it. In this case the filebuf open function will fail, but is_open will still return true.

Possible Resolution:

The Effects: clause for open should be changed to:

Effects: Calls Rdbuf()->open(s,mode). If that function returns a null pointer, calls Setstate(failbit) (which may throw ios_base::failure).

Note: What about (i)(o)fstream constructors? failbit should be set in the case they fail to open the file.

The pre-Stockholm Iostreams WG recommends accepting the above resolution.

Issue closed as described in paper X3J16/96-0128==WG21/N0946.

Requestor: Philippe Le Mouël (philippe@roguewave.com)

Miscellaneous issues

Issue Number: 27-901
Title: input/output of unsigned charT
Section: 27
Status: closed
Description:

NOTE: istream here means basic_istream.
  ostream here means basic_ostream.

This issue details all of the issues with inserting or extracting characters.

Currently, IOStreams does not allow the insertion/extraction of unsigned charT or signed charT. There are two types of functions that could insert or extract these character types: formatted IO, and unformatted IO. Formatted IO use overloaded operators. Example:

    istream& istream::operator>>(charT&);
    ostream& ostream::operator<<(charT);

Examples of unformatted IO are:

    istream& istream::get(charT *, streamsize, charT);
    int_type ostream::put(charT);
This does not allow us to overload on unsigned charT. We can make the formatted operators global, and then overload (“specialize”) on char, and wchar_t, but that doesn’t solve the unformatted problem.

There is also a problem of inserting or extracting wide-characters from a skinny stream or skinny characters from a wide-stream:

```cpp
char c;
wchar_t wc;

cout << wc;
wcout << c;
```

Possible Resolution:

Issue closed as described in motion 33 of the Stockholm Formal Motions.

Requestor: John Hinke (hinke@roguewave.com)

### Issue 27-904

**Title:** iosfwd declarations: incomplete

**Section:** 27.2 Forward declarations [lib.iostream.forward]

**Status:** closed

**Description:**

The list of forward declarations is incomplete. Should it contain all of the forward declarations available? Forward declarations for template classes basic_ios, basic_istream, and basic_ostream should have two class parameters, not one. It is equally dicey to define ios, istream, etc. by writing just one parameter for the defining classes. All should have the second parameter supplied, which suggests the need for a forward reference to template class ios_char_traits as well, or at least the two usual specializations of that class.

Possible Resolution:

The pre-Stockholm Iostreams WG recommends adding decls for streampos (see 27-910).

Issue closed as described in paper WG21/N0954R1==X3J16/96-0136R1.

Requestor: John Hinke (hinke@roguewave.com)

### Issue 27-906

**Title:** add a typedef to access the traits parameter for a class.

**Section:** 27

**Status:** closed

**Description:**

Some classes; such as istream don’t have access to the traits template parameter. Perhaps each class should provide a typedef for the traits parameter.

You need the traits parameter when you want to say stuff like:

```cpp
cin.ignore(100, traits::newline(use_facet<ctype<cin.char_type>>(cin.getloc())));
```
There is no way to get the traits type without saying something like: ios_traits<cin.char_type>
which is almost reasonable, but it would be nicer to say something like: cin::traits_type. There
are some cases where ios_traits is not the traits used to instantiate the stream.

Possible Resolution:

Issue closed as described in paper WG21/N0954R1==X3J16/96-0136R1.

Requestor: John Hinke (hinke@roguewave.com)

Issue Number: 27-907
Title: Use of “instance of” vs. “version of” in descriptions of class ios
Section: 27.2 Forward declarations [lib.iostream.forward]
Status: closed
Description:

Paragraph 2 and 3 describe the class ios and the class wios. One is described as “an instance of
the template...” the other is described as “a version of the template...”.

Possible Resolution:

Change paragraph 3 to:

“The class wios is an instance of the template class basic_ios, specialized by the type wchar_t”

Jerry Schwarz fixed the problem as editorial with the approval of the pre-Stockholm Iostreams
WG. Therefore the issue is closed with no further action.

Requestor: John Hinke (hinke@roguewave.com)

Issue Number: 27-908
Title: unnecessary ‘;’ (semicolons) in tables
Section: 27
Status: closed
Description:

There are unnecessary semicolons in tables in chapter 27. These probably should be removed.

Possible Resolution:

The only semicolons I can find are in section 27.1.2.6 Type POS_T [lib.iostreams.pos.t] “Table
2-Position type requirements”.

Jerry Schwarz fixed the problem as editorial with the approval of the pre-Stockholm Iostreams
WG. Therefore the issue is closed with no further action.

Requestor: John Hinke (hinke@roguewave.com)

Issue Number: 27-909
Title: Editorial issues (typo’s)
Section: 27
Status: closed
Description:
Here are a list of “typo’s” and other possible editorial issues.

Editorial Issue #1
Description:
27.4.4.3 basic_ios iostate flags functions [lib.iostate.flags]
The description of ios_base::exceptions is listed under the basic_ios clause.

Possible Resolution:
This needs to be moved back to the ios_base clause.

Jerry Schwarz fixed the problem as editorial with the approval of the pre-Stockholm Iostreams WG. Therefore the issue should be closed.

Editorial Issue #2
Description:
27.1.2.4 Type POS_T [lib.iostreams.pos.t]
Description of type POS_T contains many awkward phrases. Needs rewriting for clarity.

The pre-Stockholm Iostreams WG declared the issue moot.

Editorial Issue #3
Description:
27.1.2.3 Type OFF_T [lib.iostreams.off.t]
Footnote 1 should say “for one of” instead of “for one if.” Also, it should “whose representation has at least” instead of “whose representation at least.”

The pre-Stockholm Iostreams WG recommends treating as editorial. Therefore the issue is closed with no further action.

Requestor: John Hinke (hinke@roguewave.com)

Issue Number: 27-910
Title: remove streampos in favor of pos_type
Section: 27
Status: closed
Description:
There are editorial boxes in Chapter 27 that say that streampos was deprecated but no resolution on what to do with functions that use it as an argument type has been offered.

Possible Resolution:
Issue closed as described in paper X3J16/96-0112==WG21/N0930.

Requestor: John Hinke (hinke@roguewave.com)

Issue Number: 27-911
Title: stdio synchronization
Section: 27.3.1 Narrow stream objects [lib.narrow.stream.objects]
Status: closed
Description:
Doing measurements on the performance of streambufs attached to stdin on a variety of systems, I found that the performance of a simple loop:

```
while ((c = cin.get()) != EOF) ...
```

was from 5 to 20 times slower than the equivalent

```
while ((c = getc(stdin)) != EOF) ...
```

To my horror, I found that this is a result of a mandate in the WP, that stdin and cin (and also stdout and cout) must be synchronized. As a goal this seems laudable, but if the consequence in many (most) environments is either:

1. an order of magnitude slower input, or
2. breaking link compatibility with C,

maybe we should reconsider this choice, and instead allow-but-not-require that the two be synchronized.

**Possible Resolution:**

The pre-Stockholm Iostreams WG recommends that synchronization should be the default (status quo).

Issue closed as described in paper WG21/N0954R1==X3J16/96-0136R1.

**Requestor:** Nathan Myers (ncm@cantrip.org)

**Issue Number:** 27-912

**Title:** removing Notes: from the text

**Section:** 27

**Status:** closed

**Description:**

This issue is in response to Mats Meta list. It is an attempt to remove normative text from the WP. This issue removes Notes: from the text. Some Notes: clauses that need to be incorporated into the text will be handled in another issue.

Remove all Notes: clauses from the following:

- **27.4.2.1 ios_traits value functions [lib.iostreams.values]**
  int_type not_eof(char_type c)

- **27.4.3.4 ios_base storage functions [lib.iostreams.values]**
  void * & pword(int idx)

- **27.5.2.3 Get area [lib.streambuf.pub.get]**
  int_type snextc()

- **27.5.2.4.3 Get area [lib.streambuf.virt.get]**
  int showmanyc()
streamsize xsgetn(char_type *s, streamsize n)

27.6.1.2.2 basic_istream::operator>> [lib.istream::extractors]
basic_istream<charT, traits>& operator>>(char_type *s)

27.7.1.3 Overridden virtual functions [lib.stringbuf.virtuals]
int_type pbackfail(int_type c)

27.7.1.3 Overridden virtual functions [lib.stringbuf.virtuals]
int_type overflow(int_type c)

27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals]
int showmanyc()

Possible Resolution:

The pre-Stockholm Iostreams WG recommends that Non-normative notes to “[Note:” style, change normative “Notes” to some other heading word. Therefore the issue is closed as editorial.

Requestor: John Hinke (hinkejroguewave.com)

Issue Number: 27-913
Title: Incorporating Notes into the text
Section: 27
Status: closed
Description:

The following Notes clauses need to be incorporated into the WP text:

27.5.2.1 basic_streambuf constructors [lib.streambuf.cons]
basic_streambuf()

27.5.2.4.1 Locales [lib.streambuf.virtlocales]
void imbue(const locale&)

27.5.2.4.3 Get area [lib.streambuf.virt.get]
int_type underflow()

27.5.2.4.4 Putback [lib.streambuf.virt.pback]
int_type pbackfail(int c)

27.5.2.4.5 Put area [lib.streambuf.virt.put]
int_type overflow(int_type c)

27.6.1.1.1 basic_istream constructors [lib.basic.istream.cons]
virtual ~basic_istream()

27.6.1.2.2 basic_istream::operator>> [lib.istream::extractors]
basic_istream<charT, traits>& operator>>(bool& n)

27.6.1.3 Unformatted input functions [lib.istream.unformatted]
basic_istream<charT, traits>& ignore(int n, int_type delim)
27.6.2.2 basic_ostream constructors [lib.ostream.cons]
virtual ~basic_ostream()

27.6.2.4.2 basic_ostream::operator<< [lib.ostream.inserters]
basic_ostream<charT, traits>& operator<<(char_type c)
Change this Notes: clause to a Requires: clause.

27.7.1.1 basic_stringbuf constructors [lib.stringbuf.cons]
explicit basic_stringbuf(ios_base::openmode)

27.8.1.4 Overridden virtual functions [lib.filebuf.virtuals]
int_type pbackfail(int_type c)

Possible Resolution:

The pre-Stockholm Iostreams WG recommends that Non-normative notes to “[Note:” style,
change normative “Notes” to some other heading word. Therefore the issue is closed as editorial.

Requestor: John Hinke (hinke@roguewave.com)

---

Issue Number: 27-914
Title: rethrowing exceptions
Section: 27.6.2.4.1 Common requirements [lib.ostream.formatted.reqmts]
Status: closed
Description:

[NOTE: This follows directly with 27-903 --John Hinke]

The typical operator<< looks like this, given current semantics for exceptions:

```c++
{
  sentry cerberos(*this); if (!cerberos) return;
  iostate save = exceptions(); exceptions(0);

  try {
    if (use_facet< num_put<charT,ostreambuf_iterator<charT,traits>>>(
        getloc()).put(*this,*this,fill(),getloc(),val).failed())
      setstate(failbit); // won't throw
  }
  catch (...) { exceptions(save); setstate(badbit); throw; } // might throw
}
```

If we change exception semantics so that ios_base::failure just gets rethrown, without setting
badbit, we have instead:

```c++
{
  sentry cerberos(*this);
  if (!cerberos) return;
  try {
    if (use_facet< num_put<charT,ostreambuf_iterator<charT,traits>>>(
        getloc()).put(*this,*this,fill(),getloc(),val).failed())
      setstate(failbit); // might throw
```
catch (const ios_base::failure&) { throw; }
catch (...) { setstate(badbit); throw; }
}

The examples don't constitute an argument for or against the change, but rather are suggestions for the example code that should appear in [lib.ostream.formatted.reqmts] according to what is decided.

For the record, I am in favor of the change.

Possible Resolution:

We do not have any example code in 27.6.2.4.1 Common requirements [lib.ostream.formatted.reqmts], but if we want to add one, the ones described above are not correct.

The pre-Stockholm Iostreams WG recommends to add an example. The issue is closed as editorial.

Requestor: Nathan Myers (ncm@cantrip.org)

Issue Number: 27-915
Title: The use of specialization
Section: 27
Status: closed
Description:

There is wording in Clause 27 such as:

“...iostream classes are the instantiations of the...”
“...class ios is an instance of the...”
“...class wios is a version of the...”

This wording needs to be consistent with the rest of the document.

Possible Resolution:

Make the following changes to be consistent:

27.1.1 Definitions [lib.iostreams.definitions]
Replace: “-- narrow-oriented iostream classes... iostream classes are the instantiations of the...”
With: “--narrow-oriented iostream classes... iostream classes are specializations of the...”

27.1.1 Definitions [lib.iostreams.definitions]
Replace: “-- wide-oriented iostream classes... iostream classes are the instantiations of the...”
With: “-- wide-oriented iostream classes... iostream classes are specializations of the...”

27.2 Forward declarations [lib.iostream.forward] paragraph 2
Replace: “The class ios is an instance of the template...”
With: “The class ios is a specialization of the template...”
27.2 Forward declarations [lib.iostream.forward] paragraph 3
Replace: “The class wios is a version of the template...”
With: “The class wios is a specialization of the template...”

27.4.2 Template struct ios_traits [lib.ios.traits] paragraph 2
Replace: “An implementation shall provide the following two instantiations of ios_traits:”
With: “An implementation shall provide the following two specializations of ios_traits:”

27.5.2 Templates class basic_streambuf<charT, traits> [lib.streambuf] paragraph 2
Replace: “The class streambuf is an instantiation of the template...”
With: “The class streambuf is a specialization of the template...”

27.5.2 Templates class basic_streambuf<charT, traits> [lib.streambuf] paragraph 3
Replace: “The class wstreambuf is an instantiation of the template...”
With: “The class wstreambuf is a specialization of the template...”

The pre-Stockholm Iostreams WG recommends to treat as editorial, but more work is needed to preserve distinction between explicit and implicit specialization.

Issue is closed as editorial.

**Requestor:** John Hinke (hinke@roguewave.com)

**Issue Number:** 27-916
**Title:** missing descriptions of specializations
**Section:** 27
**Status:** closed

**Description:**

For compatibility, each templatized class has two specializations. One for skinny characters and one for wide characters. For example:

```cpp
template<class charT, class traits>
class basic_ios : public ios_base {
//...
};
```

Class ios is a specialization of...
Class wios is a specialization of...

These descriptions are missing for some of the classes. This proposal adds these missing descriptions.

**Possible Resolution:**

Add the following descriptions to the appropriate sections:

For class basic_ios:

27.4.4 Template class basic_ios [lib.ios]
The class ios is a specialization of the template class basic_ios specialized by the type char.
The class wios is a specialization of the template class basic_ios specialized by the type wchar_t.

For class basic_istream:

27.6.1.1 Template class basic_istream [lib.istream]
The class istream is a specialization of the template class basic_istream specialized by the type char.

The class wistream is a specialization of the template class basic_istream specialized by the type wchar_t.

For class basic_ostream:

27.6.2.1 Template class basic_ostream [lib.ostream]
The class ostream is a specialization of the template class basic_ostream specialized by the type char.

The class wostream is a specialization of the template class basic_ostream specialized by the type wchar_t.

For class basic_stringbuf:

27.7.1 Template class basic_stringbuf [lib.stringbuf]
The class stringbuf is a specialization of the template class basic_stringbuf specialized by the type char.

The class wstringbuf is a specialization of the template class basic_stringbuf specialized by the type wchar_t.

For class basic_istringstream:

27.7.2 Template class basic_istringstream [lib.istringstream]
The class istringstream is a specialization of the template class basic_istringstream specialized by the type char.

The class wistringstream is a specialization of the template class basic_istringstream specialized by the type wchar_t.

For class basic_ostringstream:

27.7.2.3 Template class basic_ostringstream [lib.ostringstream]
The class ostringstream is a specialization of the template class basic_ostringstream specialized by the type char.

The class wostringstream is a specialization of the template class basic_ostringstream specialized by the type wchar_t.

For class basic_filebuf:

27.8.1.1 Template class basic_filebuf [lib.filebuf]
The class filebuf is a specialization of the template class basic_filebuf specialized by the type char.

The class wfilebuf is a specialization of the template class basic_filebuf specialized by the type wchar_t.

For class basic_ifstream:

27.8.1.5 Template class basic_ifstream [lib.ifstream]
The class ifstream is a specialization of the template class basic_ifstream specialized by the type char.

The class wifstream is a specialization of the template class basic_ifstream specialized by the type wchar_t.

For class basic_ofstream:

**27.8.1.8 Template class basic_ofstream [lib.ofstream]**

The class ofstream is a specialization of the template class basic_ofstream specialized by the type char.

The class wofstream is a specialization of the template class basic_ofstream specialized by the type wchar_t.

The pre-Stockholm Iostreams WG recommends closing the issue with no change to the WP, since the proposal is subsumed by proposed change to `<iosfwd>` (27-904). Therefore the issue is closed with no action.

</table>

27.1.2.3 [lib.iostreams.off.t]: Paragraph 4: "Type OFF_T is convertible to type POS_T. But no validity of the resulting POS_T value is ensured, whether or not the OFF_T value is valid." Of what use is the conversion, then?

**Possible Resolution:**

The pre-Stockholm Iostreams WG recommends to treat as editorial and added a footnote.

Issue closed as editorial.
**Issue Number:** 27-919  
**Title:** Question on Table 2 assertions  
**Section:** 27.1.2.4 Table2 Position type requirements [lib.iostreams.pos.t]  
**Status:** closed  
**Description:**

27.1.2.4 [lib.iostreams.pos.t]: table 2: first row has assertion "p == P(i)" but p does not appear in the expression for that row; also, that row has the note "a destructor is assumed" -- what does this mean?

**Possible Resolution:**

The first row of table 2 should be deleted. The second row already specifies the construction and assignment from an integer value.

The pre-Stockholm Iostreams WG recommends accepting the above resolution. A larger issue is the table was voted out of the iostreams chapter as part of traits consolidation, but needs to be somewhere. The discussions of OFF_T and POS_T should be consolidated in iostreams chapter, with a note added to string chapter referring to this chapter.

Issue closed as described in paper WG21/N0957R1==X3J16/96-0139R1.

**Issue Number:** 27-920  
**Title:** destination of clog and wclog  
**Section:** 27.3.1 Narrow stream objects [lib.narrow.stream.objects], 27.3.2 Wide stream objects [lib.wide.stream.objects]  
**Status:** closed  
**Description:**

There is currently an editorial box concerning the destination of clog and wclog. I would like to propose the following resolution:

**Possible Resolution:**

Change **27.3.1 Narrow stream objects [lib.narrow.stream.objects]** paragraph 6 to:  
The object clog controls output to an implementation defined stream buffer.

Change **27.3.2 Wide stream objects [lib.wide.stream.objects]** paragraph 6 to:  
The object wclog controls output to an implementation defined stream buffer.

The pre-Stockholm Iostreams WG recommends closing with no change to the WP (delete the editorial box).

Issue closed with no action.

**Requestor:** John Hinke (hinke@roguewave.com)

---

**Issue Number:** 27-921  
**Title:** default locale argument to constructor  
**Section:** 27  
**Status:** closed
Description:

Default locale arguments for stream constructors.

istream and ostream constructors (and all derivations) should have a default locale argument, in
the manner of

    obogusstream(const char *name, const locale& l = locale());

Possible Resolution:

Add a new argument to the standard stream constructors:

    const locale& l = locale::global()

Add this new argument to the following classes’ constructors:

    basic_istream,
    basic_ostream,
    basic_istringstream,
    basic_ostringstream,
    basic_ifstream,
    basic_ofstream
    istream
    ostream

The pre-Stockholm Iostreams WG recommends closing with no change to the WP

Issue closed with no action.

            Norihiro Kumagai (kuma@slab.tnr.sharp.co.jp)

Annex D

Issue Number: 27-1001
Title: description of function setbuf is not sufficient
Section: D.6.1.3 strstreambuf overridden virtual functions [depr.strstreambuf.virtuals]
Status: closed
Description:

Description of the overridden setbuf(char* s, streamsize n) function in class strstreambuf is not
sufficient.

Possible Resolution:

The pre-Stockholm Iostreams WG recommends the behavior of the setbuf function to be implementation-
defined, except that setbuf(0,0) has no effect. The return type in the WP is correct.

Issue closed as described in paper X3J16/96-0126==WG21/N0944.
Requestor: philippe Le Mouël (philippe@roguewave.com)

Issue Number: 27-1002
Title: strstreambuf Editorial issues
Section: D.6.1 Class strstreambuf [depr.strstreambuf]
Status: closed
Description:

Class strstreambuf contains several typos and is also missing some typedefs.

Possible Resolution:

The following typedefs need to be added to class strstreambuf (D.6.1 Class strstreambuf [depr.strstreambuf]):

- typedef char_traits<char>::int_type int_type;
  This typedef is used in the strstreambuf overridden virtual functions overflow, pbackfail and underflow.

- typedef char_traits<char>::pos_type pos_type;
  This typedef is used in the strstreambuf overridden virtual functions seekoff and seekpos.

- typedef char_traits<char>::off_type off_type;
  This typedef is used in the strstreambuf overridden virtual function seekoff.

In D.6.1 Class strstreambuf [depr.strstreambuf] the notation of the strstreambuf base class is wrong it should say:

class strstreambuf : public basic_streambuf<char>

and not:

class strstreambuf : public streambuf<char> // does not exist

In D.6.1 Class strstreambuf [depr.strstreambuf] the declaration of function freeze is missing the argument name. It should say:

void freeze(bool freezeFl =1 );

and not:

void freeze(bool = 1);

The pre-Stockholm Iostreams WG recommends treating as editorial. The corrections have already been made, therefore the issue is closed with no further action.

Requestor: Philippe Le Mouël (philippe@roguewave.com)

Issue Number: 27-1003
Title: istrstream Editorial issues (typos)
Section: D.6.2 Template class istrstream [depr.istrstream]
Status: closed
Description:

Class istrstream contents several typos.

Possible Resolution:

In D.6.2 Template Class istrstream [depr.istrstream] the previous title should be changed to “D.6.2 Class istrstream”, because the class is not a template class.

In D.6.2 Template Class istrstream [depr.istrstream] the notation of the istrstream base class is wrong. It should say:

```cpp
class istrstream : public basic_istream<char>
```
and not:

```cpp
class istrstream : public istream<char>   // does not exist
```

The pre-Stockholm Iostreams WG recommends treating as editorial. The corrections have already been made, therefore the issue is closed with no further action.

Requestor: Philippe Le Mouël (philippe@roguewave.com)

---

Issue Number: 27-1004
Title: ostrstream Editorial issues (typos)
Section: D.6.3 Template class ostrstream [depr.ostrstream]
Status: closed
Description:

Class ostrstream contents several typos.

Possible Resolution:

In D.6.3 Template Class ostrstream [depr.ostrstream] the previous title should be changed to “D.6.3 Class ostrstream”, because the class is not a template class.

In D.6.3 Template Class ostrstream [depr.ostrstream] the notation of the ostrstream base class is wrong. It should say:

```cpp
class ostrstream : public basic_ostream<char>
```
and not:

```cpp
class ostrstream : public ostream<char>   // does not exist
```

In D.6.3 Template Class ostrstream [depr.ostrstream] and D.6.3.2 Member functions[depr.ostrstream.members] the declaration of function void freeze( int freezefl = 1) is not consistent with the declaration in D.6.1 Class strstreambuf [depr.strstreambuf], which is void freeze(bool freezefl =1 ). The argument should be bool or int, but not bool in one and int in the other.

The pre-Stockholm Iostreams WG recommends treating as editorial. The corrections have already been made, therefore the issue is closed with no further action.

Requestor: Philippe Le Mouël (philippe@roguewave.com)
