p0753r1 - Manipulators for C++ Synchronized Buffered Ostream (see p0053)

Peter Sommerlad, Pablo Halpern

2017-10-15

Document Number:	p0753r1
Date:	2017-10-15
Project:	Programming Language C++
Audience:	LEWG (LWG to re-check the wording)

1 Introduction

Note that this version is identical to p0753r0 except for the typo in the paper number in that version.

After Kona, Pablo asked me to add ostream manipulators for basic_osyncstream to allow users of such streams to modify their flushing behavior, when those stream objects are only know via ostream& down the call chain.

The wording for these manipulators was reviewed by LWG in Toronto (p0053r5), but their names were never discussed in LEWG, therefore I followed Jeffrey's suggestion to split them from p0053r6. For more information see that paper.

1.1 Items to be discussed by LEWG

- Naming of the manipulators
- Should the manipulators be in header <osyncstream> instead of globally available in <ostream> as are flush and endl? Putting them in <osyncstream> (only), will increase dependence on basic_osyncstream, where basic_syncbuf would suffice for inline implementation of the manipulators. That dependency could even be mitigated by non-inline implementations of the manipulators (providing their instantiations for the supported character types as is done with many other things in the iostream implementaions).
- re-check wording (done be LWG in Toronto, but minor adaptations were made, because of LWG's feedback. Pablo is OK with the edits)
- What should be the delivery vehicle for this feature: C++20 or the concurrency TS? I believe both should be addressed when moved, like with p0053.

2 p0753r1 2017-10-15

2 Wording

This wording is relative to the current C++ working draft and refers to the specification in p0053r6. It could be integrated into a Concurrency TS accordingly when p0053 gets adopted.

2.1 30.7.5.4 Standard basic_ostream manipulators [ostream.manip]

Add the following three manipulators.

```
template <class charT, class traits>
    basic_ostream<charT, traits>& emit_on_flush(basic_ostream<charT, traits>& os);
        Effects: If os.rdbuf() is a basic_osyncbuf<charT, traits, Allocator> pointer buf, calls
       buf->set_emit_on_sync(true). Otherwise this manipulator has no effect. [Note: To work
       around the issue that the Allocator template argument can not be deduced, implementations
       can introduce an intermediate base class to basic_osyncbuf that takes care its emit_on_sync
       flag. — end note
2
        Returns: os.
  template <class charT, class traits>
    basic_ostream<charT, traits>& noemit_on_flush(basic_ostream<charT, traits>& os);
3
        Effects: If os.rdbuf() is a basic_osyncbuf<charT, traits, Allocator> pointer buf, calls
       buf->set_emit_on_sync(false). Otherwise this manipulator has no effect.
4
        Returns: os.
  template <class charT, class traits>
    basic_ostream<charT, traits>& flush_emit(basic_ostream<charT, traits>& os);
5
        Effects: flush(os). Further if os.rdbuf() is a basic_osyncbuf < charT, traits, Allocator>
       pointer buf, calls buf->emit().
6
        Returns: os.
```

2.2 Implementation

An example implementation is availabile on https://github.com/PeterSommerlad/SC22WG21_Papers/tree/master/workspace/p0053_basic_osyncstreambuf
