The current standard draft does not mention labels in the description of the `maybe_unused` attribute, which seems to be an oversight as this is supported by some compilers with the non-standard `unused` attribute and appears to be a useful feature.

**Suggested Wording:**

(relative to the latest draft N2596)

6.7.11.3 The `maybe_unused` attribute

Constraint

1 The `maybe_unused` attribute shall be applied to the declaration of a structure, a union, a typedef name, a variable, a structure or union member, a function, an enumeration, or an enumerator, or a label. It shall appear at most once in each attribute list and no attribute argument clause shall be present.
