Resolutions

Draft resolution 2015.01: Reliability of project status information (General)

ISO/IEC JTC 1/SC 35

- requests its Secretariat to urgently liaise with ISO/CS so that information about the status of its projects under development is accurate, as some data is outdated by more than one year. In particular the data concerning following projects (under publication), is incorrect:
 - 9995-11 is listed as under development, ISO stage 50.20, where it should be listed as being at stage 60.00
 - 9995-9 has been listed as at stage 40.99 for over one year, while it has been at stage 60.00 since that time
 - TR 15440 is reported as being at stage 50.00. instead of 60.00
- considers that the ISO web site's reliability is seriously at stake when status are not reported properly.

➤ *Pre-recorded status: Unanimous adoption*

Draft resolution 2015.02: Systematic review of various parts of ISO/IEC 9995 published since at least 5 years (WG 1)

ISO/IEC JTC 1/SC 35

- reminds its national member bodies that for the systematic review of various parts of ISO/IEC 9995 initiated 2014-10-15, at least 5 national bodies should assess the market value of these

standards to make sure that their continuation is assured. This assessment should mention national use of the various parts.

- notes that the following uses have been reported for 9995 parts:
 - 9995-1, -2, -4 and -5 are used by most keyboards worldwide
 - 9995-3 is used in at least Canada, Germany and Finland national standards
 - 9995-7 is used by a number of keyboards worldwide
 - 9995-8 is used on almost all telephones worldwide.
- Encourages member bodies to indicate where revision should be done, and also in particular which groups (national layouts) should be added in the international standard, particularly in 9995-9.
