

CXTM

Status

- **Last vote**
 - Yes, without comments: Canada, Italy, Korea, Netherlands
 - Yes, with comments: Norway, US
 - No, unless comments accepted: UK, Japan (email not received by secretariat)
 - CXTM therefore now approved as FCD (I think)

General

- **Norway**
 - "This part of ISO 13250 must be aligned with part 2."
- **UK**
 - "The UK cannot approve this draft as it is not aligned with the current text of Part 2."
- **Resolution: accepted**

General

- **Norway**
 - "The order of exposition makes the document hard to understand. Reverse the order of sections 3, 4, and 5."
- **Resolution: accepted**

Locators

- **Norway**

- "The specified algorithm sometimes leads to locators that are different being canonicalized as though they were the same. For example, if the [base locator] property is "file:/home/myhome/mytopicmap.xtm" the following locators
- "file:/home/myhome/mytopicmap.xtm#foo"
- "file:/home/myhome/#foo"
- "file:/home/#foo"
- "file:/#foo"
-
- are all canonicalized to "#foo".
-
- Change the algorithm, for example to produce the following canonical output:
- "#foo"
- "../#foo"
- "../../#foo"
- "../../../#foo"

Resolution

- **Accepted!**
- **As [base locator] is now removed, the input to CXTM must now be a locator *and* a TMDM instance**

Whitespace

- **Norway**
 - There is no convention for inserting whitespace into CXTM output. This will lead to output that is difficult to debug. Define conventions for inserting white-space, e.g. line-break after every end- tag in element content.
- **Accepted**
 - modification: no whitespace is to be inserted in embedded markup

Numeric references

- **Norway**
 - "It is unnecessarily difficult to debug CXTM output because references to elements are by positional value (e.g., `<type topicref="1370">`) but the positional values are not stated explicitly on the elements themselves. XML elements which are referred to by positional value should have an attribute that specifies the positional value, e.g. `<topic num="1370">`, etc."
- **Accepted**

Japanese comments

- All accepted, except 2.8, which needs to be reviewed by the editor
