

**Title : Liaison Statement to Member Bodies, Liaison Organizations
(especially AOW EWOS and OIW), SC21/SWG-RA and ITU-TS on
ISP Profile Object Identifiers**

Source : ISO/IEC JTC1/SGFS

SGFS has received contributions from SC21 (SC21 N8121) and EWOS/TLG (both attached) regarding the requirement for unique object identifiers for profiles. SGFS, at its latest meeting in Seoul, had agreed with this requirement.

SGFS requests comments on and/or alternative proposals to the attached documents, including the structure and use of these object identifiers.

SGFS also requests comments on the need and possibility of forming a joint mechanism with ITU-TS under the "Joint" naming arc, so that both ISO/IEC and ITU-TS would have common identifiers.
