

Title: Liaison statement to AOW, EWOS and OIW
Subject: Object Identifiers
Source: Authorized Subgroup Meeting of the SGFS
Date: December 3, 1993
Status: Approved

SGFS has briefly reviewed document EWOS/TLG/93/181 - RWS Technical Report of the Registration of Object Identifiers in ISPs, and makes the following comments :

- SGFS agrees in principle to the change that is proposed concerning TR10000-1, and from this meeting agrees that it is possible to have more than one profile defined in an ISP part. SGFS is not sending out a new edition of TR10000-1 at this point in time, but will keep this document as an approved commentary to TR10000-1 until it does so.
- SGFS could not review the proposed RWS-TR in detail. Still, a question has been raised on Note 3 in Page 3, which (in addition to a possible typo, class identifier being N3 and not N2), seems unclear and may be interpreted as self-contradictory.
- SGFS encourages the workshops to send the revised text of this proposed RWS-TR to SGFS, possibly with proposed new text for TR10000-1 that implement the change.
