

NNI Comments on PDTR 10000-1.3 and -3

NNI approves PDTR 10000 parts 1 and 3 (SGFS/N1178 and SGFS/N1181) with the following comments:

Comments from NNI on SGFS N1178 - TR 10000 part 1.

- 1) Issue: align definitions of Base Standard (3.1.1), International Standardized Profile (3.1.2) and Profile (3.1.4), and introduce the possibility make normative references from an ISP to a National Standard.

Proposal: replace definitions in 3.1.1, 3.1.2 and 3.1.4 as follows:

3.1.1 Base Standard: An approved International Standard or ITU-T Recommendation.

3.1.2 International Standardized Profile (ISP): An Internationally agreed-to, harmonized document which describes one or more profiles.

3.1.4 Profile: A set of one or more base standards, ISPs, and/or standards produced by a ISO recognized standardizing body, and, where applicable, the identification of chosen classes, conforming subsets, options and parameters of those standards or ISPs, necessary to accomplish a particular function.

In 6.1.2, replace page 5, line 32 by:

An ISP shall make normative references only to base standards, other ISPs and standards produced by a ISO recognized standardizing body.

Note: the SGFS procedures should have a requirement that when a standard produced by a ISO recognized standardizing body is referenced, this standardizing body should give explicit approval of the reference.

- 2) Issue: the text in clause 7.3 does not need a separate clause.

Proposal: move the text from 7.3 to the end of 7.1, and delete 7.3
