

SGFS N1420

Title: Issues on the SGFS programme of work - request for input from Regional Workshops

Source: ISO/IEC SGFS Plenary Meeting - London, 20-22 May 1997

1. The attached document, SGFS(ISP) N684 (UK comments on ISP 12059-1 to -6, Common information for management functions) has been received by SGFS. The document identifies defects which have arisen in the process of producing these ISPs and, as a result, raises some issues which it believes need to be considered by SGFS.
2. SGFS considers that the issues raised relate to the activities of the Regional Workshops in developing ISPs as well as to the activities of SGFS itself, and that they need to be considered in the context the review of wider requirements for activity on ISPs which is addressed by SGFS N1421, <questionnaire>.
3. SGFS therefore requests the Regional Workshops to review the issues raised in SGFS(ISP) N684 in conjunction with the questions in SGFS N1421. Responses are requested by 31 August 1997.
