Annex E: Language tagging using Tag Characters (informative)

E.1 Overview

The purpose of Tag characters is to associate a text attribute with a point or range of a text string. The value of a particular tag is not generally considered to be part of the content of the text. For example, tagging could be used to mark the language or the font applied to a portion of text. Outside of that usage, those characters are ignorable.

These tag characters are to be used to spell out a character string in any ASCII-based tagging scheme that needs to be embedded into plain text. These characters can be easily identified by their code value and there is no overloading of usage for these tag characters. They can only express tag values and never textual content itself.

When characters are used within the context of a protocol or syntax containing explicit markup providing the same association, the Tag characters may be filtered out and ignored by these protocols.

For example, in SGML/XML context, an explicit language markup is specified. Therefore, the LANGUAGE TAG and other tag characters should not be used to mark a language in that context. The Unicode Consortium and the W3C have co-written a technical report: Unicode in XML and other Markup Languages (TR#20), available from the Unicode web site (<http://www.unicode.org>), which describes in details these issues.

The TAGS block contain 97 dedicated tag characters consisting of a clone of the BASIC LATIN graphic characters (names formed by prefixing these BASIC LATIN names with the word 'TAG'), as well as a tag language identification character: LANGUAGE TAG and a tag cancel character: CANCEL TAG.

The tag identification character is used as a mechanism for identifying tags of different types. This enables multiple types of tags to coexist amicably embedded in plain text and solves the problem of delimitation if a tag is concatenated directly onto another tag. Although only one type of tag is currently specified, namely the language tag, the encoding of other tag identification characters in the future would allow for distinct types to be used.

E.2 Syntax for embedding tags characters

In order to embed any ASCII-derived tag in plain text, the tag is simply spelled out with the tag characters instead, prefixed with the relevant tag identification character. The resultant string is embedded directly in the text.

No termination character is required for a tag. A tag terminates either when the first non-SPP character is encountered, or when the next tag identification character is encountered.

All tag arguments are only encoded with the tag characters. No other characters are valid for expressing the tag argument.

E.3 Tag scope and nesting

The value of a tag continues from the point the tag is embedded in text until:

- either the end of the cc-data-element is reached,
- or the tag is explicitly cancelled by the CANCEL TAG character.

Tags of the same type cannot be nested in any way. The appearance of a new embedded language tag, for example after text which was already language tagged, simply changes the tagged value for subsequent text to that specified in the new tag.

E.4 Canceling tag values

The CANCEL TAG character is provided to allow the specific canceling of a tag value. For example to cancel a language tag, the LANGUAGE TAG must precede the CANCEL TAG character.

The usage of the CANCEL TAG character without a prefixed tag identification character cancels any tag value that may be defined.

The main function of the character is to make possible such operations as blind concatenation of strings in a tagged context without the propagation of inappropriate tag values across the string boundaries.

E.5 Language tags

Language tags are of general interest and may have a high degree of interoperability for protocol usage. For example, to embed a language tag for Japanese, the tag characters would be used as follows:

```
0E0001 0E006A 0E0061
```

The first value is the coded value of the LANGUAGE TAG character, the second corresponds to the TAG LATIN SMALL LETTER J, and the third corresponds to the TAG LATIN SMALL LETTER A. The sequence 'ja' corresponds to the Japanese language in ISO 639:1988.

Annex F: Usage of musical symbols (informative)

The musical symbols repertoires are made of combining characters and other characters. As such their usage is specified by the clause 24 of ISO/IEC 10646-1. The following text describes in more details the usage of these combining characters.

F.1 Byzantine musical symbols

The Byzantine Musical Notation System makes use of the so-called 'three-stripe' effect. There are signs that appear in the Upper, Middle or Lower stripes. Their names are appended respectively with the comment '(u)', '(m)' and '(l)'. Other signs are known as musical characters and appear in the textual part of the notation system. Multiple signs can be stacked together in their appropriate stripe.

F.2 Western musical symbols

This standard does not specify an encoding solution for musical scores or musical pitch. Solutions for these needs would require another description layer on top of the encoding definition of the characters specified in this standard. However, even without that additional layer, these characters can be used as simple musical reference symbols in general purpose text description of musical matters.

Extensive beams are used frequently in music notation between groups of notes having short values. The format characters WESTERN MUSICAL SYMBOL BEAM-START and WESTERN MUSICAL SYMBOL BEAM-END can be used to indicate the extents of beam groupings. In some exceptional cases, beams are unclosed on one end. This can be indicated with a "null note" (WESTERN MUSICAL SYMBOL NULL NOTEHEAD) character if no stem is to appear at the end of the beam.

Similarly, other format characters have been provided for other connecting structures. The characters

- WESTERN MUSICAL SYMBOL TIE-START,
- WESTERN MUSICAL SYMBOL TIE-END,
- WESTERN MUSICAL SYMBOL SLUR-START,
- WESTERN MUSICAL SYMBOL SLUR-END,
- WESTERN MUSICAL SYMBOL PHRASE-START,
- WESTERN MUSICAL SYMBOL PHRASE-END

indicate the extent of these features.

These pairs of characters modify the layout and grouping of notes and phrases in full music notation. When musical examples are written or rendered in plain text without special software, the start/end control characters may be rendered as brackets or left uninterpreted. More sophisticated in-line processes may interpret them, to the extent possible, in their

actual control capacity, rendering slurs, beams, and so forth as appropriate.

For maximum flexibility, the character set includes both pre-composed note values and primitives from which complete notes may be constructed. Due to their ubiquity, the pre-composed versions are provided mainly for convenience. In addition to coding ease, their use will also reduce data size. Although these characters are not formally equivalent, in practice conforming devices may not want to distinguish among the following sequence pairs:

WESTERN MUSICAL SYMBOL HALF NOTE	≈	WESTERN MUSICAL SYMBOL VOID NOTEHEAD + WESTERN MUSICAL SYMBOL STEM
----------------------------------	---	--

WESTERN MUSICAL SYMBOL QUARTER NOTE	≈	WESTERN MUSICAL SYMBOL NOTEHEAD BLACK + WESTERN MUSICAL SYMBOL STEM
-------------------------------------	---	---

WESTERN MUSICAL SYMBOL EIGHTH NOTE	≈	WESTERN MUSICAL SYMBOL NOTEHEAD BLACK + WESTERN MUSICAL SYMBOL STEM PLUS FLAG ONE
------------------------------------	---	---

WESTERN MUSICAL SYMBOL SIXTEENTH NOTE	≈	WESTERN MUSICAL SYMBOL NOTEHEAD BLACK + WESTERN MUSICAL SYMBOL STEM PLUS FLAG TWO
---------------------------------------	---	---

WESTERN MUSICAL SYMBOL THIRTY-SECOND NOTE	≈	WESTERN MUSICAL SYMBOL NOTEHEAD BLACK + WESTERN MUSICAL SYMBOL STEM PLUS FLAG THREE
---	---	---

WESTERN MUSICAL SYMBOL SIXTY-FOURTH NOTE	≈	WESTERN MUSICAL SYMBOL NOTEHEAD BLACK + WESTERN MUSICAL SYMBOL STEM PLUS FLAG FOUR
--	---	--

WESTERN MUSICAL SYMBOL ON HUNDRED TWENTY-EIGHTH NOTE	≈	WESTERN MUSICAL SYMBOL NOTEHEAD BLACK + WESTERN MUSICAL SYMBOL STEM PLUS FLAG FIVE
--	---	--

Coding convenience notwithstanding, notes built up from alternative noteheads, stems and flags, and articulation symbols are necessary for complete implementations and complex scores. Examples of their use include American shape-note and modern percussion notations. For example,

WESTERN MUSICAL SYMBOL SQUARE NOTEHEAD BLACK
+ WESTERN MUSICAL SYMBOL STEM

WESTERN MUSICAL SYMBOL X NOTEHEAD + WESTERN
MUSICAL SYMBOL STEM

Augmentation dots and articulation symbols may be
appended to either the pre-composed or built-up
notes. For example:

	≈	WESTERN MUSICAL
WESTERN MUSICAL		SYMBOL NOTEHEAD BLACK
SYMBOL EIGHTH NOTE +		+ WESTERN MUSICAL
WESTERN MUSICAL		SYMBOL STEM PLUS FLAG
SYMBOL AUGMENTATION		ONE + WESTERN MUSICAL
DOT		SYMBOL AUGMENTATION
		DOT

	≈	WESTERN MUSICAL
WESTERN MUSICAL		SYMBOL NOTEHEAD BLACK
SYMBOL QUARTER NOTE		+ WESTERN MUSICAL
+ WESTERN MUSICAL		SYMBOL STEM + WESTERN
SYMBOL STACCATO		MUSICAL SYMBOL
		STACCATO

In addition, augmentation dots and articulation
symbols may be repeated as necessary to build a
complete note symbol. For example,

WESTERN MUSICAL SYMBOL EIGHTH NOTE + WESTERN
MUSICAL SYMBOL AUGMENTATION DOT + WESTERN
MUSICAL SYMBOL AUGMENTATION DOT + WESTERN
MUSICAL SYMBOL ACCENT
