Title: Characters approved by WG2 for PDAM 1 of ISO/IEC 10646

Date: 2003-10-22

N2676

Status: contributing editor's summary of accepted character proposals, input document for PDAM document

Action: for review by WG2 and other experts prior to publication of PDAM

Distribution: WG2 delegates and experts

Replaces: N2623R

Status

The characters presented in this document have been reviewed by SC2/WG2 and have been approved for addition to the PDAM document with code positions and character names as shown in this document. The WG document number for all proposals has been provided for reference.

Most of the characters presented in this document have been reviewed by the Unicode Technical Committee — where they have been approved by UTC for addition to a future version of the Unicode Standard, that information is presented in a marginal note. A series of \$\$\$\$ indicates the presence of a issue that needs to be resolved as part of synchronization.

Manner of Presentation

The characters have been presented in the same style that would be used for publishing the Unicode Standard, with the addition of marginal notes documenting the source of the characters. This was done deliberately in order to be able to document some of the draft annotations for the reviewers.

The character names and code points shown are the ones that will be used in the PDAM, with exception of any ISO character name comments and Annex P annotation '*', which are suppressed in this style of presentation. Where such omission occurs, it has been noted in an annotation.

Unlike the presentation style to be used for the actual PDAM, but like document N2623R which this document replaces, the new characters are not shown in the context of the existing characters. The existing characters will be shown in the actual PDAM document. The occasional use of the word <reserved> in this draft is an artifact of the production process and should be ignored.

Note to Reviewers

Please review that this document accurately reflects the decisions taken at meeting M44, and if possible, alert the contributing editors to any discrepancies before the PDAM gets issued.
