Proposal Attached: X_ Yes __ No, but what's your interest?

This proposal is for adding boolean as a new type, not just a macro for an existing integer type. At the Kona meeting, we approved a Boolean type with standards words to be supplied. The following are the changes to the standard.

In subclause 6.1.1, Keywords, add the keyword "bool".

In subclause 6.1.2.5, Types, add after paragraph #1 the paragraph:

> An object declared as type "bool" is large enough to store the values "true" and "false" and shall have values 1 and 0, respectively.

In subclause 6.1.2.5, Types, change the first sentence in paragraphs #10 and #16 from:

> The type "char", ...

to

The type "bool", the type "char", ...

In subclause 6.2.1, Characters and integers:

Change the title to ‘‘Boolean values, characters, and integers’’.

Change the first sentence from

A "char"

to

A "bool", a "char"

Add paragraph #3:

When a value with integral type is demonted to a "bool", the result is "false" if the value is 0, and "true" otherwise.
