**N3155 - Examples of Undefined Behavior for Annex J.2.**

This document describes the issues around the development of the [[Examples of undefined Behavior for Annex J.2.]].

**Legal Issues**

ISO and IEC do not recognize any licenses other than their own and will not honor any other license without a long, protracted series of negotiations with their lawyers. Therefore, do not submit proprietary code, or any code that is attached to a license that must accompany the code, such as the GNU Public License. This material is intended to become an ISO/IEC document, so any contributions carry implicit permission to be published by ISO and IEC.

**Citations**

Many code examples are external to this document, in which case they cite their sources. The code examples come from:

  - The following subsections of Section 5 of TS 17961 have no examples that demonstrate undefined behavior: 4, 7, 8, 9, 10 (exception), 11 (example 2), 12, 16, 17, 18, 19, 21, 24, 25, 38, 39, 42, 43, 46

- **CERT C Rule** (published 2016 snapshot of SEI CERT C Rule) (NCCE = Noncompliant Code Example)

- **CERT C Rec** (recommendations)

It is expected that before final publication of this document, all of the code examples will be inlined. The CERT code examples are reproduced with permission of the owner.

**Development Rules**

Here are some rules that the UB examples should comply with:

1. All examples on this page should compile with a popular compiler (that is, MSVC, GCC, or Clang)
2. If an example fails to compile with a popular compiler, but does compile with a more obscure compiler, then we should note the compiler used, including version number.
3. Any example that fails to build under every compiler we know of is incomplete...we should ideally find a compiler that builds it. (The compiler may produce any warnings, but should not produce any fatal errors.)
4. Finally, if we cannot produce an example that compiles, then perhaps that UB should be eliminated and any such code should be ill-formed, and require a fatal diagnostic in translation.

Tasks

If you get a few minutes to work on this page, you can do one of two things:

- Replace any TODO with a suitable coding example. If you like your example, then add your name (last name good enough) to the ‘Reviewers:’ section right below the TODO.
- Review any UB coding example and verify that it is good (eg it correctly illustrates the particular UB).
  - If you like the example as is, then add your name to the Reviewers section.
  - If you don’t like the example, then please repair or replace the example.
- If you modify the example, then add your name to the Reviewers section AND erase the other reviewers (since they haven’t reviewed your changes yet).
- Eventually we should eliminate all the TODOs, and every code example should have a set of reviewers (preferably 3 or more) that approve of the example.

Statistics

Total Number of UB”s in document: 221
Total Number of TODO’s: 85 Total Number of Code Examples from TS 17961: 37 Total Number of Code Examples from CERT C: 49 Total Number of Original Code Examples: 66

Note that the latter statistics total up to 237, and this is because some UBs have multiple code examples.

Acknowledgments

This document was suggested by Aaron Ballman.
Examples of Undefined Behavior for Annex J.2.

For details about the development of this document, see [[About Examples of Undefined Behavior For Annex J.2]].

Format

The enumeration of UBs corresponding to ‘C23’ definitions are taken from N3149.

The term COMPILABLE appears for some of the UB’s listed here. These are UBs where we cannot think of code that both demonstrates the UB and compiles without errors in GCC or Clang. What should we do about these UBs? Assuming no one can provide a compiler that builds such examples, perhaps we should state that these UBs are obsolete, or instead that these programs should be ill-formed.

The format of this document is is:

- C23 UB Number
- UB Definition
- Examples
- Reviewers.

Examples

1. A “shall” or “shall not” requirement that appears outside of a constraint is violated (Clause 4).

See UB Example #4, which violates a ‘shall’ statement.

Reviewers: svoboda, UBSG

2. A nonempty source file does not end in a new-line character which is not immediately preceded by a backslash character or ends in a partial preprocessing token or comment (5.1.1.2).

CERT C Rec MSC04-C 1st NCCE

Reviewers: svoboda

3. Token concatenation produces a character sequence matching the syntax of a universal character name (5.1.1.2).

CERT C Rule PRE30-C 1st NCCE 2.1.1

Reviewers: svoboda, s.maddanimath

4. A program in a hosted environment does not define a function named main using one of the specified forms (5.1.2.2.1).

```c
#include <stdio.h>

int main(float argc) // Undefined behavior
```
5. The execution of a program contains a data race (5.1.2.4).

CERT C Rule CON32-C 1st NCCE 14.3.1, CON40-C 1st NCCE 14.11.1

Reviewers: svoboda

6. A character not in the basic source character set is encountered in a source file, except in an identifier, a character constant, a string literal, a header name, a comment, or a preprocessing token that is never converted to a token (5.2.1).

TODO

Reviewers:

7. An identifier, comment, string literal, character constant, or header name contains an invalid multibyte character or does not begin and end in the initial shift state (5.2.1.1).

/* In UTF-8 Lowercase n-with-tilde == ñ == U+00F1 == 0xC3 0xB1 == \303 \261 */
const char ma\303ana[] = "tomorrow"; /* invalid UTF-8, missing \261 */
/* Undefined Behavior if built in UTF-8 locale */

TODO: COMPILABLE EXAMPLE?

Reviewers: svoboda, USBG

8. The same identifier has both internal and external linkage in the same translation unit (6.2.2).

CERT C Rule DCL36-C 1st NCCE 3.3.1

Reviewers: svoboda, s.maddanimath

(Note: the following is a different example which is more complex)

static int a;
int f()
{
    int a;
    {
        extern int a; // not internal!
    }
}

Reviewers: uecker
9. An object is referred to outside of its lifetime (6.2.4).
CERT C Rule DCL30-C 1st NCCE 3.1.1, 2nd NCCE 3.1.4, 3rd NCCE 3.1.6 CERT C Rule EXP35-C 1st NCCE 4.5.1, 2nd NCCE 4.5.3
Reviewers: svoboda, s.maddanimath

10. The value of a pointer to an object whose lifetime has ended is used (6.2.4).
TS17961 5.14 [nullref] EXAMPLE 5.15 [addrescape] EXAMPLE 1, 2, 3
Reviewers: svoboda

11. The value of an object with automatic storage duration is used while the object has an indeterminate representation (6.2.4, 6.7.10, 6.8).
TS17961 5.35 [uninitref] EXAMPLE 1, 2 CERT C Rule EXP33-C 4th NCCE 4.3.9, CERT C Rec MSC22-C 3rd NCCE
Reviewers: svoboda, s.maddanimath

12. A non-value representation is read by an lvalue expression that does not have character type (6.2.6.1).
TS17961 5.35 [uninitref] EXAMPLE 3, 4
Reviewers: svoboda

13. A non-value representation is produced by a side effect that modifies any part of the object using an lvalue expression that does not have character type (6.2.6.1).
TODO
Reviewers:

14. Two declarations of the same object or function specify types that are not compatible (6.2.7).
TS17961 5.13 [funcdecl] EXAMPLE 1, 2, 4
Reviewers: svoboda

15. A program requires the formation of a composite type from a variable length array type whose size is specified by an expression that is not evaluated (6.2.7).
TODO
Reviewers:
16. Conversion to or from an integer type produces a value outside the range that can be represented (6.3.1.4).

CERT C Rule FLP34-C 1st NCCE 6.3.1, FLP36-C 1st NCCE 6.4.1

Reviewers: svoboda

17. Demotion of one real floating type to another produces a value outside the range that can be represented (6.3.1.5).

CERT C Rule FLP34-C 2nd NCCE 6.3.3

Reviewers: svoboda

18. An lvalue does not designate an object when evaluated (6.3.2.1).

TODO

Reviewers:

19. A non-array lvalue with an incomplete type is used in a context that requires the value of the designated object (6.3.2.1).

TODO

Reviewers:

20. An lvalue designating an object of automatic storage duration that could have been declared with the register storage class is used in a context that requires the value of the designated object, but the object is uninitialized. (6.3.2.1).

```c
void f(void) {
    /* register */ int x; // address of x not taken, so x could be stored in a register
    int y = x;          // Undefined Behavior
}
```

Reviewers: svoboda, uecker

21. An lvalue having array type is converted to a pointer to the initial element of the array, and the array object has register storage class (6.3.2.1).

```c
void f(void) {
    register int a[3];
    int *p = a;
    a[0] = 1;
    p[0]; // Undefined Behavior
}
```

Reviewers: svoboda
22. An attempt is made to use the value of a void expression, or an implicit or explicit conversion (except to void) is applied to a void expression (6.3.2.2).

```c
void f(void);

(int)f(); // Undefined Behavior
int i;
i = f(); // violates constraint of assignment operator
```

TODO: COMPILABLE EXAMPLE?

Reviewers:

23. Conversion of a pointer to an integer type produces a value outside the range that can be represented (6.3.2.3).

TS17961 5.10 [intptrconv] EXAMPLE 1,2

Reviewers: svoboda

24. Conversion between two pointer types produces a result that is incorrectly aligned (6.3.2.3).

TS17961 5.11 [alignconv] EXAMPLE 1

Reviewers: svoboda

25. A pointer is used to call a function whose type is not compatible with the referenced type (6.3.2.3).

TS17961 5.6 [argcomp] EXAMPLE 1

Reviewers: svoboda, s.maddanimath

26. An unmatched ‘ or ” character is encountered on a logical source line during tokenization (6.4).

TODO

Reviewers:

27. A reserved keyword token is used in translation phase 7 or 8 for some purpose other than as a keyword (6.4.1).

TODO

Reviewers:

28. A universal character name in an identifier does not designate a character whose encoding falls into one of the specified ranges (6.4.2.1).

TODO
29. The initial character of an identifier is a universal character name designating a digit (6.4.2.1).

30. Two identifiers differ only in nonsignificant characters (6.4.2.1).

31. The identifier __func__ is explicitly declared (6.4.2.2).
   ```c
   void __func__(void); // Undefined Behavior
   ```

32. The program attempts to modify a string literal (6.4.5).

33. The characters ',', \, "", /*, or */ occur in the sequence between the < and > delimiters, or the characters ',', \, //, or /* occur in the sequence between the" delimiters, in a header name preprocessing token (6.4.7).
   ```c
   #include "dave's_hello.h"
   // Undefined Behavior
   ```

34. A side effect on a scalar object is unsequenced relative to either a different side effect on the same scalar object or a value computation using the value of the same scalar object (6.5).

35. An exceptional condition occurs during the evaluation of an expression (6.5).

36. An object has its stored value accessed other than by an lvalue of an allowable type (6.5).
C18-37. For a call to a function without a function prototype in scope, the number of arguments does not equal the number of parameters (6.5.2.2).

TS17961 5.6 [argcomp] EXAMPLE 2
Reviewers: svoboda, s.maddanimath

C18-38. For a call to a function without a function prototype in scope where the function is defined with a function prototype, either the prototype ends with an ellipsis or the types of the arguments after default argument promotion are not compatible with the types of the parameters (6.5.2.2).

TS17961 5.6 [argcomp] EXAMPLE 3
Reviewers: svoboda, s.maddanimath

37. A function is defined with a type that is not compatible with the type (of the expression) pointed to by the expression that denotes the called function (6.5.2.2).

TS17961 5.6 [argcomp] EXAMPLE 4, 5.13 [funcdecl] EXAMPLE 3
Reviewers: svoboda, s.maddanimath

38. A member of an atomic structure or union is accessed (6.5.2.3).

```c
_Atomic struct {
    int x;
} foo;
foo.x;  // Undefined Behavior
```

Reviewers: uecker, svoboda

39. The operand of the unary * operator has an invalid value (6.5.3.2).

```c
char* p = NULL;
*p;  // Undefined Behavior
```

Reviewers: svoboda

40. A pointer is converted to other than an integer or pointer type (6.5.4).

```c
int main()
{
    int *intptr;
    int intvar;
    char charvar;
    intvar = (int) intptr;
    charvar = (char) intptr;  // Undefined Behavior
    return 0;
}
```

Reviewers: s.maddanimath, svoboda
41. The value of the second operand of the / or % operator is zero (6.5.5).
TS17961 5.26 [diverr] EXAMPLE 1
Reviewers: svoboda, s.maddanimath

42. If the quotient a/b is not representable, the behavior of both a/b and a%b (6.5.5).
TS17961 5.26 [diverr] EXAMPLE 2
Reviewers: svoboda, s.maddanimath

43. Addition or subtraction of a pointer into, or just beyond, an array object and an integer type produces a result that does not point into, or just beyond, the same array object (6.5.6).
TS17961 5.22 [invptr] EXAMPLE 1
Reviewers: svoboda

44. Addition or subtraction of a pointer into, or just beyond, an array object and an integer type produces a result that points just beyond the array object and is used as the operand of a unary * operator that is evaluated (6.5.6).
TS17961 5.22 [invptr] EXAMPLE 4, 6, 10, 12
Reviewers: svoboda

45. Pointers that do not point into, or just beyond, the same array object are subtracted (6.5.6).
TS17961 5.36 [ptrobj] EXAMPLE, CERT C Rule ARR36-C 1st NCCE 7.3.1
Reviewers: svoboda

46. An array subscript is out of range, even if an object is apparently accessible with the given subscript (as in the lvalue expression a[1][7] given the declaration int a[4][5]) (6.5.6).
TS17961 5.22 [invptr] EXAMPLE 8
Reviewers: svoboda

47. The result of subtracting two pointers is not representable in an object of type ptrdiff_t (6.5.6).
#include <stdlib.h>
size_t size = 1 + (SIZE_MAX / 2);
char* x = malloc(size);
assert(x != 0);
char* start = x;
char* too_far = x + size;
ptrdiff_t too_big = too_far - start; // Undefined Behavior
Reviewers: svoboda
48. An expression is shifted by a negative number or by an amount greater than or equal to the width of the promoted expression (6.5.7).

CERT C Rule INT34-C 1st NCCE 5.5.1, 2nd NCCE 5.5.3, 3rd NCCE 5.5.5

Reviewers: svoboda

49. An expression having signed promoted type is left-shifted and either the value of the expression is negative or the result of shifting would not be representable in the promoted type (6.5.7).

CERT C Rule INT32-C 6th NCCE 5.3.8.1, CERT C Rule INT34-C 2nd NCCE 5.5.3

Reviewers: svoboda

50. Pointers that do not point to the same aggregate or union (nor just beyond the same array object) are compared using relational operators (6.5.8).

```c
struct {
    int x;
    int y;
} a, b;
if (&a.y < &b.y) { // Undefined Behavior
    // ...
}
```

Reviewers: uecker, svoboda

51. An object is assigned to an inexactely overlapping object or to an exactly overlapping object with incompatible type (6.5.16.1).

TODO

Reviewers:

52. An expression that is required to be an integer constant expression does not have an integer type; has operands that are not integer constants, named constants, compound literal constants, enumeration constants, character constants, predefined constants, sizeof expressions whose results are integer constants, alignof expressions, or immediately-cast floating constants; or contains casts (outside operands to sizeof and alignof operators) other than conversions of arithmetic types to integer types (6.6).

TODO

Reviewers:
53. A constant expression in an initializer is not, or does not evaluate to, one of the following:
a named constant, a compound literal constant, an arithmetic constant expression, a null
pointer constant, an address constant, or an address constant for a complete object type plus
or minus an integer constant expression (6.6).

TODO

Reviewers:

54. An arithmetic constant expression does not have arithmetic type; has operands that are
not integer constants, floating constants, named and compound literal constants of
arithmetic type, character constants, predefined constants, sizeof expressions whose results
are integer constants, or alignof expressions; or contains casts (outside operands to sizeof or
alignof operators) other than conversions of arithmetic types to arithmetic types (6.6).

TODO

Reviewers:

55. The value of an object is accessed by an array-subscript [], member-access . or ->, address
&, or indirection * operator or a pointer cast in creating an address constant (6.6).

TODO

Reviewers:

56. An identifier for an object is declared with no linkage and the type of the object is
incomplete after its declarator, or after its init-declarator if it has an initializer (6.7).

TODO

Reviewers:

57. A function is declared at block scope with an explicit storage-class specifier other than
extern (6.7.1).

TODO

Reviewers:

58. A structure or union is defined without any named members (including those specified
indirectly via anonymous structures and unions) (6.7.2.1).

TODO

Reviewers:

59. An attempt is made to access, or generate a pointer to just past, a flexible array member
of a structure when the referenced object provides no elements for that array (6.7.2.1).

CERT C Rule ARR30-C 5th NCCE 7.1.10
Reviewers: svoboda

60. When the complete type is needed, an incomplete structure or union type is not completed in the same scope by another declaration of the tag that defines the content (6.7.2.3).

TODO: COMPILABLE EXAMPLE?

Reviewers:

61. An attempt is made to modify an object defined with a const-qualified type through use of an lvalue with non-const-qualified type (6.7.3).

CERT C Rule EXP40-C 1st NCCE 4.9.1

Reviewers: svoboda

62. An attempt is made to refer to an object defined with a volatile-qualified type through use of an lvalue with non-volatile-qualified type (6.7.3).

CERT C Rule EXP32-C 1st NCCE 4.2.1

Reviewers: svoboda, s.maddanimath

63. The specification of a function type includes any type qualifiers (6.7.3).

```c
typedef int fun_t(int);
const fun_t f; // Undefined Behavior
```

Reviewers: uecker, svoboda

64. Two qualified types that are required to be compatible do not have the identically qualified version of a compatible type (6.7.3).

TODO

Reviewers:

65. An object which has been modified is accessed through a restrict-qualified pointer to a const-qualified type, or through a restrict-qualified pointer and another pointer that are not both based on the same object (6.7.3.1).

TS17961 5.33 [restrict] EXAMPLE 1, 2, CERT C Rule EXP43-C 2st NCCE 4.11.2.1, 3rd NCCE 4.11.2.3, 5th NCCE 4.11.4.1

Reviewers: svoboda

66. A restrict-qualified pointer is assigned a value based on another restricted pointer whose associated block neither began execution before the block associated with this pointer, nor ended before the assignment (6.7.3.1).

CERT C Rule EXP43-C 1st NCCE 4.11.1.1, 4th NCCE 4.11.3.1, 6th NCCE 4.11.5.1
67. A function with external linkage is declared with an inline function specifier, but is not also defined in the same translation unit (6.7.4).

```c
extern inline int foo(int x); // Undefined Behavior
```

68. A function declared with a _Noreturn function specifier returns to its caller (6.7.4).

```c
#include <stdnoreturn.h>
_Noreturn void f(void) {
    return; // Undefined Behavior at run-time
}
```

69. The definition of an object has an alignment specifier and another declaration of that object has a different alignment specifier (6.7.5).

TODO

70. Declarations of an object in different translation units have different alignment specifiers (6.7.5).

TODO

71. Two pointer types that are required to be compatible are not identically qualified, or are not pointers to compatible types (6.7.6.1).

TODO

72. The size expression in an array declaration is not a constant expression and evaluates at program execution time to a nonpositive value (6.7.6.2).

TODO

73. In a context requiring two array types to be compatible, they do not have compatible element types, or their size specifiers evaluate to unequal values (6.7.6.2).

CERT C Rule EXP39-C 4th NCCE 4.8.7

Reviewers: s.maddanimath
74. A declaration of an array parameter includes the keyword static within the [ and ] and the corresponding argument does not provide access to the first element of an array with at least the specified number of elements (6.7.6.3).

TODO

Reviewers:

75. A storage-class specifier or type qualifier modifies the keyword void as a function parameter type list (6.7.6.3).

```c
void f(const void);
void g(register void); // Undefined Behavior
```

TODO: COMPILABLE EXAMPLE?

Reviewers:

76. In a context requiring two function types to be compatible, they do not have compatible return types, or their parameters disagree in use of the ellipsis terminator or the number and type of parameters (after default argument promotion, when there is no parameter type list) (6.7.6.3).

TODO

Reviewers:

77. A declaration for which a type is inferred contains a pointer, array, or function declarators (6.7.9).

TODO

Reviewers:

78. A declaration for which a type is inferred contains no or more than one declarators (6.7.9).

TODO

Reviewers:

79. The value of an unnamed member of a structure or union is used (6.7.10).

TODO

Reviewers:

80. The initializer for a scalar is neither a single expression, an empty initializer, nor a single expression enclosed in braces (6.7.10).

TODO

Reviewers:
81. The initializer for a structure or union object is neither an initializer list nor a single expression that has compatible structure or union type (6.7.10).

TODO

Reviewers:

82. The initializer for an aggregate or union, other than an array initialized by a string literal, is not a brace enclosed list of initializers for its elements or members (6.7.10).

TODO

Reviewers:

83. A function definition that does not have the asserted property is called by a function declaration or a function pointer with a type that has the unsequenced or reproducible attribute (6.7.12.7).

TODO

Reviewers:

84. An identifier with external linkage is used, but in the program there does not exist exactly one external definition for the identifier, or the identifier is not used and there exist multiple external definitions for the identifier (6.9).

TODO

Reviewers:

C18-87. An adjusted parameter type in a function definition is not a complete object type (6.9.1).

```c
// no previous definition of struct foo
void f(struct foo x) {}  // Undefined Behavior
```

TODO: COMPILABLE EXAMPLE?

Reviewers:

85. A function that accepts a variable number of arguments is defined without a parameter type list that ends with the ellipsis notation (6.9.1).

TODO: COMPILABLE EXAMPLE?

Reviewers:

86. The } that terminates a function is reached, and the value of the function call is used by the caller (6.9.1).

CERT C Rule MSC37-C 1st NCCE 15.4.1, 2nd NCCE 15.4.3, 3rd NCCE 15.4.3.1

Reviewers: svoboda
87. An identifier for an object with internal linkage and an incomplete type is declared with a tentative definition (6.9.2).

TODO

Reviewers:

88. A non-directive preprocessing directive is executed (6.10).

TODO

Reviewers:

89. The token defined is generated during the expansion of a #if or #elif preprocessing directive, or the use of the defined unary operator does not match one of the two specified forms prior to macro replacement (6.10.1).

TODO

Reviewers:

90. The #include preprocessing directive that results after expansion does not match one of the two header name forms (6.10.2).

TODO

Reviewers:

91. The character sequence in an #include preprocessing directive does not start with a letter (6.10.2).

TODO

Reviewers:

92. There are sequences of preprocessing tokens within the list of macro arguments that would otherwise act as preprocessing directives (6.10.4).

CERT C Rule PRE32-C 1st NCCE 2.3.1

Reviewers: svoboda

93. The result of the preprocessing operator # is not a valid character string literal (6.10.4.2).

TODO

Reviewers:

94. The result of the preprocessing operator ## is not a valid preprocessing token (6.10.4.3).

TODO

Reviewers:
95. The #line preprocessing directive that results after expansion does not match one of the two well-defined forms, or its digit sequence specifies zero or a number greater than 2147483647 (6.10.5).

TODO

Reviewers:

96. A non-STDC #pragma preprocessing directive that is documented as causing translation failure or some other form of undefined behavior is encountered (6.10.7).

TODO

Reviewers:

97. A #pragma STDC preprocessing directive does not match one of the well-defined forms (6.10.7).

TODO

Reviewers:

98. The name of a predefined macro, or the identifier defined, is the subject of a #define or #undef preprocessing directive (6.10.9).

TODO

Reviewers:

99. An attempt is made to copy an object to an overlapping object by use of a library function, other than as explicitly allowed (e.g., memmove) (Clause 7).

CERT C Rule EXP43-C 4th NCCE 4.11.3.1

Reviewers: svoboda

100. A file with the same name as one of the standard headers, not provided as part of the implementation, is placed in any of the standard places that are searched for included source files (7.1.2).

CERT C Rec PRE04-C 1st NCCE

Reviewers: svoboda

101. A header is included within an external declaration or definition (7.1.2).

TODO

Reviewers:
102. A function, object, type, or macro that is specified as being declared or defined by some standard header is used before any header that declares or defines it is included (7.1.2).

TODO

Reviewers:

103. A standard header is included while a macro is defined with the same name as a keyword (7.1.2).

TODO

Reviewers:

104. The program attempts to declare a library function itself, rather than via a standard header, but the declaration does not have external linkage (7.1.2).

CERT C Rule DCL37-C 4th NCCE 3.4.7

Reviewers: svoboda, s.maddanimath

105. The program declares or defines a reserved identifier, other than as allowed by 7.1.4 (7.1.3).

TS17961 5.44 [resident] EXAMPLE 1, 2, 4, 6, 8

Reviewers: svoboda

106. The program removes the definition of a macro whose name begins with an underscore and either an uppercase letter or another underscore (7.1.3).

#undef __STDC_UTF_32__

// Undefined Behavior

Reviewers: svoboda

107. An argument to a library function has an invalid value or a type not expected by a function with a variable number of arguments (7.1.4).

#include <stdio.h>

printf("Hello, %s!\n", 123); // Undefined Behavior

Reviewers: svoboda

108. The pointer passed to a library function array parameter does not have a value such that all address computations and object accesses are valid (7.1.4).

Reviewers: svoboda
109. The macro definition of assert is suppressed to access an actual function (7.2).

CERT C Rule MSC38-C 1st NCCE 15.5.1

Reviewers: svoboda

110. The argument to the assert macro does not have a scalar type (7.2).

```c
#include <assert.h>

int a[5];
assert(a);  // Undefined Behavior
```

Reviewers: svoboda

111. The CX_LIMITED_RANGE, FENV_ACCESS, or FP_CONTRACT pragma is used in any context other than outside all external declarations or preceding all explicit declarations and statements inside a compound statement (7.3.4, 7.6.1, 7.12.2).

TODO

```c
void f(void)
{
    int a;
    #pragma FP_CONTRACT OFF
}
```

Reviewers: uecker

112. The value of an argument to a character handling function is neither equal to the value of EOF nor representable as an unsigned char (7.4).

TS17961 5.32 [chrsgnext] EXAMPLE

Reviewers: svoboda

113. A macro definition of errno is suppressed to access an actual object, or the program defines an identifier with the name errno (7.5).

TS17961 5.44 [resident] EXAMPLE 1, CERT C Rule MSC38-C 2nd NCCE 15.5.3

Reviewers: svoboda

114. Part of the program tests floating-point status flags, sets floating-point control modes, or runs under non-default mode settings, but was translated with the state for the FENV_ACCESS pragma “off” (7.6.1).

TODO

Reviewers:
115. The exception-mask argument for one of the functions that provide access to the floating-point status flags has a nonzero value not obtained by bitwise OR of the floating-point exception macros (7.6.4).

TODO

Reviewers:

116. The fesetexceptflag function is used to set floating-point status flags that were not specified in the call to the fegetexceptflag function that provided the value of the corresponding fexcept_t object (7.6.4.5).

TODO

Reviewers:

117. The argument to fesetenv or feupdateenv is neither an object set by a call to fegetenv or feholdexcept, nor is it an environment macro (7.6.6.3, 7.6.6.4).

TODO

Reviewers:

118. The value of the result of an integer arithmetic or conversion function cannot be represented (7.8.2.1, 7.8.2.2, 7.8.2.3, 7.8.2.4, 7.24.6.1, 7.24.6.2, 7.24.1).

TODO

Reviewers:

119. The program modifies the string pointed to by the value returned by the setlocale function (7.11.1.1).

TS17961 5.29 [libmod] EXAMPLE 1

Reviewers: svoboda

120. A pointer returned by the setlocale function is used after a subsequent call to the function, or after the calling thread has exited (7.11.1.1).

#include <locale.h>

char *locale1 = setlocale(LC_ALL, "");
assert(locale1);
/* ... */
char *locale2 = setlocale(LC_ALL, "");
int size = strlen(locale1);    // Undefined Behavior

Reviewers: svoboda
121. The program modifies the structure pointed to by the value returned by the localeconv function (7.11.2.1).

TS17961 5.29 [libmod] EXAMPLE 2

Reviewers: svoboda

122. A macro definition of math_errhandling is suppressed or the program defines an identifier with the name math_errhandling (7.12).

TODO

Reviewers:

123. An argument to a floating-point classification or comparison macro is not of real floating type (7.12.3, 7.12.17).

TODO

Reviewers:

124. A macro definition of setjmp is suppressed to access an actual function, or the program defines an external identifier with the name setjmp (7.13).

#include <setjmp.h>

int setjmp(char* foo); // Undefined Behavior

Reviewers: svoboda

125. An invocation of the setjmp macro occurs other than in an allowed context (7.13.2.1).

CERT C Rec MSC22-C 1st NCCE

Reviewers: svoboda

126. The longjmp function is invoked to restore a nonexistent environment (7.13.2.1).

CERT C Rec MSC22-C,2nd NCCE

Reviewers: svoboda

127. After a longjmp, there is an attempt to access the value of an object of automatic storage duration that does not have volatile-qualified type, local to the function containing the invocation of the corresponding setjmp macro, that was changed between the setjmp invocation and longjmp call (7.13.2.1).

CERT C Rec MSC22-C 3rd NCCE

Reviewers: svoboda
128. The program specifies an invalid pointer to a signal handler function (7.14.1.1).
#include "signal.h"

void *handler = NULL;
signal(handler, SIG_IGN);  // Undefined Behavior

Reviewers: svoboda

129. A signal handler returns when the signal corresponded to a computational exception (7.14.1.1).

CERT C Rule: SIG35-C, 1st NCCE

Reviewers: svoboda

130. A signal handler called in response to SIGFPE, SIGILL, SIGSEGV, or any other implementation-defined value corresponding to a computational exception returns (7.14.1.1).

CERT C Rule SIG35-C 1st NCCE 12.4.1

Reviewers: svoboda

131. A signal occurs as the result of calling the abort or raise function, and the signal handler calls the raise function (7.14.1.1).

TS17961 5.5 [asyncsig] EXAMPLE 2, CERT C Rule SIG30-C 3rd NCCE 12.1.5

Reviewers: svoboda

132. A signal occurs other than as the result of calling the abort or raise function, and the signal handler refers to an object with static or thread storage duration that is not a lock-free atomic object other than by assigning a value to an object declared as volatile sig_atomic_t, or calls any function in the standard library other than the abort function, the _Exit function, the quick_exit function, the functions in <stdatomic.h> (except where explicitly stated otherwise) when the atomic arguments are lock-free, the atomic_is_lock_free function with any atomic argument, or the signal function (for the same signal number) (7.14.1.1).

TS17961 5.3 [accsig] EXAMPLE, 5.5 [asyncsig] EXAMPLE 1, 3

Reviewers: svoboda

133. The value of errno is referred to after a signal occurred other than as the result of calling the abort or raise function and the corresponding signal handler obtained a SIG_ERR return from a call to the signal function (7.14.1.1).

CERT C Rule ERR32-C 1st NCCE 13.2.1

Reviewers: svoboda
134. A signal is generated by an asynchronous signal handler (7.14.1.1).

CERT C Rule SIG30-C 2nd NCCE 12.1.3

Reviewers: svoboda

135. The signal function is used in a multi-threaded program (7.14.1.1).

CERT C Rule CON37-C 1st NCCE 14.8.1

Reviewers: svoboda

136. A function with a variable number of arguments attempts to access its varying arguments other than through a properly declared and initialized va_list object, or before the va_start macro is invoked (7.16, 7.16.1.1, 7.16.1.4).

```c
#include <stdio.h>
#include <stdarg.h>

void f(int last, ...) {
    va_list args;
    int number = va_arg(args, int); // Undefined Behavior
    va_start( args, last); // oops, should precede va_args!
    printf("The number is %d\n", number);
    va_end(args);
}

int main() {
    f(1, 2, 3);
    return 0;
}
```

Reviewers: svoboda

137. The macro va_arg is invoked using the parameter ap that was passed to a function that invoked the macro va_arg with the same parameter (7.16).

```c
#include <stdio.h>
#include <stdarg.h>

void g(va_list args) {
    int number = va_arg(args, int);
    printf("The first variadic number is %d\n", number);
}

void f(int last, ...) {
    va_list args;
    va_start( args, last);
    g(args);
    int number = va_arg(args, int); // Undefined Behavior
    printf("The next variadic number is %d\n", number);
    va_end(args);
```
void main() {
    f(1, 2, 3);
}

Reviewers: svoboda

138. A macro definition of va_start, va_arg, va_copy, or va_end is suppressed to access an actual function, or the program defines an external identifier with the name va_copy or va_end (7.16.1).
#include <stdarg.h>

    // Undefined Behavior
    #undef va_arg

Reviewers: svoboda

139. The va_start or va_copy macro is invoked without a corresponding invocation of the va_end macro in the same function, or vice versa (7.16.1, 7.16.1.2, 7.16.1.3, 7.16.1.4).
#include <stdarg.h>

void f(int last, ...) {
    va_list args;
    va_start(args, last);
    /* Undefined Behavior, missing va_end(args) */
}

Reviewers: svoboda

140. The va_arg macro is invoked when there is no actual next argument, or with a specified type that is not compatible with the promoted type of the actual next argument, with certain exceptions (7.16.1.1).
CERT C Rec DCL10-C 1st NCCE, CERT C Rule MSC39-C 1st NCCE 15.6.1

Reviewers: svoboda

141. The type parameter to the va_arg macro does not name an object type (7.16.1.1).
#include <stdio.h>
#include <stdarg.h>

int main() {
    int x[] = {1, 2};
    int y[] = {3, 4};
    my_printf("My data", x, y);
}

void my_printf(const char* prefix, ...) {
    va_list args;
int *x;
int *y;
va_start(args, prefix);
x = va_arg(args, int*); /* OK */
y = va_arg(args, int[2]); /* Undefined Behavior */
va_end(args);
printf("%s: [%d, %d], [%d, %d]\n", prefix, x[0], x[1], y[0], y[1]);
}

Reviewers: svoboda, UBSG

142. Using a null pointer constant in form of an integer expression as an argument to a … function and then interpreting it as a void* or char* (7.16.1.1).

CERT C Rec DCL10-C 1st NCCE, CERT C Rule MSC39-C 1st NCCE 15.6.1

Reviewers: svoboda

143. The va_copy or va_start macro is invoked to initialize a va_list that was previously initialized by either macro without an intervening invocation of the va_end macro for the same va_list (7.16.1.2, 7.16.1.4).
#include <stdarg.h>

void f(int last, ...) {
    va_list args;
    va_start(args, last);
    va_start(args, last); // Undefined Behavior
    va_end(args);
}

Reviewers: svoboda

144. The va_start macro is invoked with additional arguments that include unbalanced parentheses, or unrecognized preprocessing tokens (7.16.1.4).

CERT C Rec DCL10-C 1st NCCE, CERT C Rule MSC39-C 1st NCCE 15.6.1

Reviewers: svoboda

C18-145. The parameter parmN of a va_start macro is declared with the register storage class, with a function or array type, or with a type that is not compatible with the type that results after application of the default argument promotions (7.16.1.4).
#include <stdio.h>
#include <stdarg.h>

void f(int last, ...) {
    register int wrong = 0;
    va_list args;
    va_start(args, wrong); // Undefined Behavior
    int number = va_arg(args, int); // Undefined Behavior, no arg!
printf("The next variadic number is \%d\n", number);
va_end(args);
}

145. The macro definition of a generic function is suppressed to access an actual function (7.17.1, 7.18).

TODO

146. The type parameter of an offsetof macro defines a new type (7.21).

TODO

147. When program execution reaches an unreachable() macro invocation (7.21.1).

TODO

148. Arbitrarily copying or changing the bytes of or copying from a non-null pointer into a nullptr_t object and then reading that object (7.21.2).

TODO

149. The member-designator parameter of an offsetof macro is an invalid right operand of the . operator for the type parameter, or designates a bit-field (7.21).

TODO

150. The argument in an instance of one of the integer-constant macros is not a decimal, octal, or hexadecimal constant, or it has a value that exceeds the limits for the corresponding type (7.22.4).

TODO

151. A byte input/output function is applied to a wide-oriented stream, or a wide character input/output function is applied to a byte-oriented stream (7.23.2).

#include <stdio.h>
#include <wchar.h>
int main() {
    FILE* in = fopen("foo.txt", "r");

    wchar_t wide_line[80];
    fgetws(wide_line, sizeof(wchar_t) * sizeof(wide_line), in);
    // the stream is now oriented for wide characters
    wprintf(L"The first line is: %ls", wide_line);

    char line[80];
    fgets(line, sizeof(line), in); // Undefined behavior
    printf("The second line is: %s", line);

    return 0;
}

Reviewers: svoboda

152. Use is made of any portion of a file beyond the most recent wide character written to a wide-oriented stream (7.23.2).

TODO (but this may be removed from C23 as of @sei-svoboda's clarity request n3064)

153. The value of a pointer to a FILE object is used after the associated file is closed (7.23.3).

CERT C Rule FIO46-C 1st NCCE 10.12.1

Reviewers: svoboda

154. The stream for the fflush function points to an input stream or to an update stream in which the most recent operation was input (7.23.5.2).

#include <stdio.h>

FILE* f = fopen("foo", "r");
fflush(f); // Undefined Behavior

Reviewers: svoboda

155. The string pointed to by the mode argument in a call to the fopen function does not exactly match one of the specified character sequences (7.23.5.3).

#include <stdio.h>

FILE* f = fopen("foo", "read"); // Undefined Behavior

Reviewers: svoboda
156. An output operation on an update stream is followed by an input operation without an intervening call to the fflush function or a file positioning function, or an input operation on an update stream is followed by an output operation with an intervening call to a file positioning function (7.23.5.3).

TS17961 5.27 [ioioleave] EXAMPLE

Reviewers: svoboda

157. An attempt is made to use the contents of the array that was supplied in a call to the setvbuf function (7.23.5.6).

```c
#include <stdio.h>
#define SIZE 1024
char buf[SIZE];
FILE _file = fopen("foo", "r");
if (file == 0 ||
    setvbuf(file, buf, buf ? IOFBF : IONBF, SIZE) != 0) {
    /* Handle error */
}
/* ... */
buf[0] = '\0'; // Undefined Behavior
```

Reviewers: svoboda

158. There are insufficient arguments for the format in a call to one of the formatted input/output functions, or an argument does not have an appropriate type (7.23.6.1, 7.23.6.2, 7.31.2.1, 7.31.2.2).

TS17961 5.45 [invfmtstr] EXAMPLE, CERT C Rec DCL10-C 2nd NCCE

Reviewers: svoboda, UBSG

159. The format in a call to one of the formatted input/output functions or to the strftime or wcsftime function is not a valid multibyte character sequence that begins and ends in its initial shift state (7.23.6.1, 7.23.6.2, 7.29.3.5, 7.31.2.1, 7.31.2.2, 7.31.5.1).

```c
#include <stdio.h>
#include <locale.h>
setlocale(LC_ALL, "UTF-8");
/* In UTF-8: the Euro symbol == '€' == U+20AC == \xE2 \x82 \xAC == \342 \202 \254 */
const char s[] = {"\xE2", '\0'}; // invalid UTF-8
printf(s); // Undefined Behavior in UTF-8 locale
```

Reviewers: svoboda, UBSG
160. In a call to one of the formatted output functions, a precision appears with a conversion specifier other than those described (7.23.6.1, 7.31.2.1).
#include <stdio.h>

void f(char c) {
    printf("%.3c", c);  // Undefined Behavior
}

Reviewers: svoboda

161. A conversion specification for a formatted output function uses an asterisk to denote an argument-supplied field width or precision, but the corresponding argument is not provided (7.23.6.1, 7.31.2.1).
#include <stdio.h>

void f(int i) {
    printf("%*i\n", i);  // Undefined Behavior
}

Reviewers: svoboda

162. A conversion specification for a formatted output function uses a # or 0 flag with a conversion specifier other than those described (7.23.6.1, 7.31.2.1).
#include <stdio.h>

void f(char* s) {
    printf("%0s", s);  // Undefined Behavior
}

Reviewers: svoboda

163. A conversion specification for one of the formatted input/output functions uses a length modifier with a conversion specifier other than those described (7.23.6.1, 7.23.6.2, 7.31.2.1, 7.31.2.2).
#include <stdio.h>

void f(int* pi) {
    printf("%lp", pi);  /* 'l' not defined for %p */
}

Reviewers: svoboda

164. An s conversion specifier is encountered by one of the formatted output functions, and the argument is missing the null terminator (unless a precision is specified that does not require null termination) (7.23.6.1, 7.31.2.1).

TS17961 5.3.1 [nonnullcs] EXAMPLE 1

Reviewers: svoboda
165. An n conversion specification for one of the formatted input/output functions includes any flags, an assignment-suppressing character, a field width, or a precision (7.23.6.1, 7.23.6.2, 7.31.2.1, 7.31.2.2).
#include <stdio.h>

void f(int* pi) {
    printf("%-n", pi); // Undefined Behavior
}

Reviewers: svoboda

166. A % conversion specifier is encountered by one of the formatted input/output functions, but the complete conversion specification is not exactly %%(7.23.6.1, 7.23.6.2, 7.31.2.1, 7.31.2.2).
#include <stdio.h>

void f(void) {
    printf("%-%"); // Undefined Behavior
}

Reviewers: svoboda

167. An invalid conversion specification is found in the format for one of the formatted input/output functions, or the strftime or wcsftime function (7.23.6.1, 7.23.6.2, 7.29.3.5, 7.31.2.1, 7.31.2.2, 7.31.5.1).
#include <stdio.h>

void f(int i) {
    printf("%q", i); /* %q not defined */
}

Reviewers: svoboda

168. The number of characters or wide characters transmitted by a formatted output function (or written to an array, or that would have been written to an array) is greater than INT_MAX (7.23.6.1, 7.31.2.1).
#include <stdio.h>

void f(int i) {
    printf("%*iX", INT_MAX, i); // Undefined Behavior
}

Reviewers: svoboda

169. The number of input items assigned by a formatted input function is greater than INT_MAX (7.23.6.2, 7.31.2.2).
#include <stdio.h>
#include <limits.h>
#include <stdarg.h>
/* Assume this function is called with >INT_MAX arguments */
void f(int unused, ...) {
    va_list args;
    va_start(args, unused);

    static unsigned int size = (unsigned int) INT_MAX + 1U;

    char format_string[size*2 + 1]; // will be "%c%c%c..."
    for (unsigned int i = 0; i < size; i++) {
        format_string[i] = '%';
        format_string[i+1] = 'c';
    }
    format_string[size*2] = '\0';

    vscanf(format_string, args); // Undefined Behavior
}

Reviewers: svoboda

170. The result of a conversion by one of the formatted input functions cannot be represented in the corresponding object, or the receiving object does not have an appropriate type (7.23.6.2, 7.31.2.2).

CERT C Rec INT05-C 1st NCCE

Reviewers: svoboda

171. A c, s, or [ conversion specifier is encountered by one of the formatted input functions, and the array pointed to by the corresponding argument is not large enough to accept the input sequence (and a null terminator if the conversion specifier is s or []) (7.23.6.2, 7.31.2.2).

TS17961 5.40 [taintformatio] EXAMPLE 1

Reviewers: svoboda

172. A c, s, or [ conversion specifier with an l qualifier is encountered by one of the formatted input functions, but the input is not a valid multibyte character sequence that begins in the initial shift state (7.23.6.2, 7.31.2.2).

#include <stdio.h>
#include <locale.h>

setlocale(LC_ALL, "UTF-8");
/* In UTF-8: the Euro symbol == '€' == U+20AC == \xE2 \x82 \xAC == 342 \202 \254 */
const char invalid[] = { '\xE2', '\0' }; // invalid UTF-8
char c;
sscanf(invalid, "%c", &c); // Undefined Behavior in UTF-8 locale

Reviewers: svoboda
173. The input item for a %p conversion by one of the formatted input functions is not a value converted earlier during the same program execution (7.23.6.2, 7.31.2.2).

```
#include <stdio.h>

char addr[] = "0x12345678"; // not produced by this code
void* ptr;
sscanf(addr, "%p", &ptr); // Undefined Behavior
```

Reviewers: svoboda

174. The vfprintf, vfscanf, vprintf, vscanf, vsnprintf, vsprintf, vsscanf, vfwprintf, vfwscanf, vswprintf, vswscanf, vwprintf, or vwscanf function is called with an improperly initialized va_list argument, or the argument is used (other than in an invocation of va_end) after the function returns (7.23.6.8, 7.23.6.9, 7.23.6.10, 7.23.6.11, 7.23.6.12, 7.23.6.13, 7.23.6.14, 7.31.2.5, 7.31.2.6, 7.31.2.7, 7.31.2.8, 7.31.2.9, 7.31.2.10).

```
#include <stdio.h>

CERT C Rule ENV32-C 2nd NCCE 11.3.3

Reviewers: svoboda

189. The string set up by the getenv or strerror function is modified by the program (7.24.4.6, 7.26.6.3).

TS17961 5.29 [libmod] EXAMPLE 3, 4

Reviewers: svoboda

190. A signal is raised while the quick_exit function is executing (7.24.4.7).

TODO

Reviewers:

191. A command is executed through the system function in a way that is documented as causing termination or some other form of undefined behavior (7.24.4.8).

TODO

Reviewers:
192. A searching or sorting utility function is called with an invalid pointer argument, even if the number of elements is zero (7.24.5).

TODO

Reviewers:

193. The comparison function called by a searching or sorting utility function alters the contents of the array being searched or sorted, or returns ordering values inconsistently (7.24.5).

TODO

Reviewers:

194. The array being searched by the bsearch function does not have its elements in proper order (7.24.5.1).

TODO

Reviewers:

195. The current conversion state is used by a multibyte/wide character conversion function after changing the LC_CTYPE category (7.24.7).

fscanf() is defined is in C23 s7.23.6.2. Example 6, (paragraph 23) in this section describes a hypothetical encoding with shift states, which we will use for this example:

```c
#include <stdio.h>
#include <stdlib.h>
#include <wchar.h>
#include <memory.h>
#include <locale.h>

char str[50];
wchar_t wstr[50];
memset(wstr, 0, sizeof(wstr));
int counter = 0;
setlocale(LC_CTYPE, "HYPO"); // Use hypothetical encoding
/* Suppose standard input contains the single line: ↑□X□Y↓ */
fgets(str, sizeof(str), stdin); // str == "↑□X□Y↓"
counter += mbtowc(wstr, str, 4); // wstr == "□X", upper state
setlocale(LC_CTYPE, "C"); // state changed
counter += mbtowc(wstr, &str[counter], 4); // Undefined Behavior
```

Reviewers: svoboda

196. A string or wide string utility function is instructed to access an array beyond the end of an object (7.26.1, 7.31.4).

CERT C Rule STR38-C 1st NCCE 8.6.1, 2nd NCCE 8.6.2, 3rd NCCE 8.6.4
197. A string or wide string utility function is called with an invalid pointer argument, even if the length is zero (7.26.1, 7.31.4).

```c
#include <string.h>

char* c = 0;
int length = strlen(c);  // Undefined Behavior
```

Reviewers: svoboda

198. The contents of the destination array are used after a call to the strxfrm, strftime, wcscxfrm, or wcsftime function in which the specified length was too small to hold the entire null-terminated result (7.26.4.5, 7.29.3.5, 7.31.4.4.4, 7.31.5.1).

TODO

Reviewers:

199. A sequence of calls of the strtok function is made from different threads (7.26.5.9).

```c
#include <string.h>
#include <threads.h>

int bar(void*) {
    char* t = strtok(NULL, "#,");  // Undefined Behavior
    return t[0];
}

char str[] = "?a???b,,,#c";
char* t = strtok(str, "?");
thread_t thr;
if (thrd_success != thrd_create(&thr, bar, 0)) {
    /* Handle error */
}

t = strtok(NULL, ",");  // Undefined behavior

int retval;
if (thrd_success != thrd_join(thr, &retval)) {
    /* Handle error */
}
```

Reviewers: svoboda, CliveP, robin-rowe

200. The first argument in the very first call to the strtok or wcstok is a null pointer (7.26.5.9, 7.31.4.6.7).

```c
#include <string.h>

static char str[] = "?a???b,,,#c";
```
char *t;
t = strtok(NULL, ";"); // Undefined Behavior

Reviewers: svoboda

201. A pointer returned by the strerror function is used after a subsequent call to the function, or after the calling thread has exited (7.26.6.3).
#include <stdio.h>
#include <errno.h>

char* inval = strerror(EINVAL);
char* perm = strerror(EPERM);
printf("Invalid: %s\n", inval); /* Undefined Behavior, invalidated by perm */
printf("Permission: %s\n", perm);

Reviewers: svoboda

202. The type of an argument to a type-generic macro is not compatible with the type of the corresponding parameter of the selected function (7.27).

TODO

Reviewers:

203. Arguments for generic parameters of a type-generic macro are such that some argument has a corresponding real type that is of standard floating type and another argument is of decimal floating type (7.27).

TODO

Reviewers:

204. Arguments for generic parameters of a type-generic macro are such that neither <math.h> and <complex.h> define a function whose generic parameters have the determined corresponding real type (7.27).

TODO

Reviewers:

205. A complex argument is supplied for a generic parameter of a type-generic macro that has no corresponding complex function (7.27).

TODO

Reviewers:

206. A decimal floating argument is supplied for a generic parameter of a type-generic macro that expects a complex argument (7.27).

TODO
Reviewers:

207. A standard floating or complex argument is supplied for a generic parameter of a type-generic macro that expects a decimal floating type argument (7.27).

TODO

Reviewers:

208. A non-recursive mutex passed to mtx_lock is locked by the calling thread (7.28.4.3).

```
#include <threads.h>

mtx_t m;
if (thrd_success != mtx_init(&m, mtx_plain)) {
    /* Handle error */
}
if (thrd_success != mtx_lock(&m)) {
    /* Handle error */
}
if (thrd_success != mtx_lock(&m)) { /* Undefined Behavior */
    /* Handle error */
}
mtx_destroy(&m);

Reviewers: svoboda

209. The mutex passed to mtx_timedlock does not support timeout (7.28.4.4).

```
#include <threads.h>
#include <time.h>

mtx_t m;
if (thrd_success != mtx_init(&m, mtx_plain)) { /* oops, should be mtx_timed */
    /* Handle error */
}
struct timespec ts;
if (0 == timespec_get(&ts, TIME_UNIX_MICROSEC)) {
    /* Handle error */
}
ts.tv_sec += 1; /* 1 second from now */
if (thrd_success != mtx_timedlock(&m, &ts)) { /* Undefined Behavior */
    /* Handle error */
}
mtx_destroy(&m);
```
210. The mutex passed to mtx_unlock is not locked by the calling thread (7.28.4.6).
#include <threads.h>

mtx_t m;
if (thrd_success != mtx_init(&m, mtx_plain)) {
    /* Handle error */
}
if (thrd_success != mtx_unlock(&m)) { /* Undefined Behavior */
    /* Handle error */
}
mtx_destroy(&m);

Reviewers: svoboda

211. The thread passed to thrd_detach or thrd_join was previously detached or joined with another thread (7.28.5.3, 7.28.5.6).

CERT C Rule CON39-C 1st NCCE 14.10.1

Reviewers: svoboda

212. The tss_create function is called from within a destructor (7.28.6.1).
#include <threads.h>

void destructor(void* arg) {
    tss_t key;
    if (thrd_success != tss_create(&key, 0)) { /* Undefined Behavior */
        /* Handle error */
    }
}

int func(void*) {
    tss_t key;
    if (thrd_success != tss_create(&key, destructor)) {
        /* Handle error */
    }
    static char str[] = "Hello";
    tss_set(key, str);
    return 0;
}

int foo(void*) {
    thrd_t thr;
    if (thrd_success != thrd_create(&thr, func, 0)) {
        /* Handle error */
    }
int retval;
if (thrd_success != thrd_join(thr, &retval)) {
    /* Handle error */
    return 0;
}

Reviewers: svoboda

213. The key passed to tss_delete, tss_get, or tss_set was not returned by a call to tss_create before the thread commenced executing destructors (7.28.6.2, 7.28.6.3, 7.28.6.4).
#include <threads.h>

void destructor(void* arg) {
    tss_t key;
    if (thrd_success != tss_create(&key, 0)) { /* Undefined Behavior */
        /* Handle error */
    }
}

int func(void*) {
    tss_t key;
    static char str[] = "Hello";
    tss_set(key, str); /* Undefined Behavior, key not initialized by tss_create() */
    return 0;
}

int foo(void*) {
    thr_t thr;
    if (thrd_success != thrd_create(&thr, func, 0)) { /* Handle error */
    }

    int retval;
    if (thrd_success != thrd_join(thr, &retval)) { /* Handle error */
        return 0;
    }
}

Reviewers: svoboda

214. An attempt is made to access the pointer returned by the time conversion functions after the thread that originally called the function to obtain it has exited (7.29.3).
#include <stdio.h>
#include <threads.h>
#include <time.h>
char* now = 0;

int bar(void*) {
    time_t n1;
    if ((time_t) -1 == time(&n1)) {
        /* Handle error */
    }
    struct tm* n2 = localtime(&n1);
    now = asctime(n2);
    return 0;
}

void foo(void) {
    thrd_t thr;
    if (thrd_success != thrd_create(&thr, bar, 0)) {
        /* Handle error */
    }
    int retval;
    if (thrd_success != thrd_join(thr, &retval)) {
        /* Handle error */
    }
    printf("The time is %s\n", now); /* Undefined Behavior */
}

Reviewers: svoboda

215. At least one member of the broken-down time passed to asctime contains a value outside its normal range, or the calculated year exceeds four digits or is less than the year 1000 (7.29.3.1).

CERT C Rule MSC33-C 1st NCCE 15.3.1

Reviewers: svoboda

216. The argument corresponding to an s specifier without an l qualifier in a call to the fwprintf function does not point to a valid multibyte character sequence that begins in the initial shift state (7.31.2.11).

#include <wchar.h>
#include <locale.h>

setlocale(LC_ALL, "UTF-8");
/* In UTF-8: the Euro symbol == '€' == U+20AC == \xE2 \x82 \xAC == \342 \202 \254 */
const char invalid[] = {'\xE2', '\0'}; // invalid UTF-8
fwprintf(stdout, L"The string is %ls\n", invalid);
/* Undefined Behavior in UTF-8 Locale */
**217.** In a call to the wcstok function, the object pointed to by ptr does not have the value stored by the previous call for the same wide string (7.31.4.6.7).

```c
#include <wchar.h>
#include <stdio.h>

wchar_t input[20] = L"foo bar baz";
wchar_t* buffer;
wchar_t* token = wcstok(input, L" ", &buffer);
while (token) {
    wprintf(L"%ls\n", token);
    wcscpy(buffer, input); // buffer changed
    token = wcstok(0, L" ", &buffer); // Undefined Behavior
}
```

**Reviewers:** svoboda

**218.** An mbstate_t object is used inappropriately (7.31.6).

CERT C Rule EXP33-C 3rd NCCE 4.3.7

**Reviewers:** svoboda, s.maddanimath

**219.** The value of an argument of type wint_t to a wide character classification or case mapping function is neither equal to the value of WEOF nor representable as a wchar_t (7.32.1).

```c
#include <wchar.h>

int main() {
    int flag = iswalpha(WINT_MIN);
    // Undefined Behavior if sizeof(wchar_t) < sizeof(wint_t)
}
```

**Reviewers:** svoboda

**220.** The iswctype function is called using a different LC_CTYPE category from the one in effect for the call to the wctype function that returned the description (7.32.2.2.1).

See UB 191 for background on LC_CTYPE categories. (editor; UB 191 of which version?)

```c
#include <wchar.h>
#include <locale.h>

int f(wint_t wc) {
    wctype_t alpha = wctype("alpha");
    setlocale(LC_CTYPE, "C"); // state changed
    return iswctype(wc, alpha); // Undefined Behavior
}
```

**Reviewers:** svoboda
221. The towctrans function is called using a different LC_CTYPE category from the one in effect for the call to the wctrans function that returned the description (7.32.3.2.1).

```c
#include <wchar.h>
#include <wctype.h>
#include <locale.h>

wint_t f(wint_t wc) {
    wctype_t lower = wctrans("tolower");
    setlocale(LC_CTYPE, "C");  // state changed
    return towctrans(wc, lower);  // Undefined Behavior
}
```
