Profile Test Specifications for FOD Profiles

SGFS has reviewed SC18 N3594 regarding standardization of Profile Test Specifications for FOD Profiles.

TR 10000-1.2 is about to complete its ballot, and already has simple references to TR 10183. and indicates the intention to extend the text to include requirements for test specifications. SGFS does not feel able to make further changes to TR 10000-1 at this stage of its processing.

However, SGFS expects to readdress this issue at an Authorised Subgroup Meeting due to be held in London in December 1992.
